BUILDING TRUST SINCE 1983

- Superior quality
- Spotless Surface Finish
- Minimal Gauge Variation
- Efficient Delivery Channel
- Competitive price
- Skilled and experienced technocrats

STAINLESS STEEL SHEETS

We manufacture Cold Rolled Stainless Steel Sheets in following Specifications :

Grades	J7, J6, J5, J4, 304, 316, 400 Series	-
Sheet length	1500 to 3000mm	[(+ -) 3%]
Sheet Width	uptil 535mm	[(+ -) 3%]
Thickness	0.5 to 10mm	[(+ -) 3%]

Surface Finishes : 2D, 2B (Skin Pass)

Hardness : Full, Half, Quarter, Soft as per requirement

In-house Blanking & Shearing Services
for precision and quality control

APPLICATIONS

HOUSEWARE: Cutlery, Sinks, Saucepans, Washing Machine Drums, Microwave Oven Liners, Switch Gears, Razor Blades.

ARCHITECTURAL: Hinges, Door Handle, L-Drop, Locks, Cladding, Handrails, Door and Window Fittings, Street Furniture, Structural Sections.

TRANSPORT: Exhaust Systems, Car Trim/Grilles, Road Tankers, Ship Containers, Ships Chemical Tankers, Refuse Vehicles.

CHEMICAL/PHARMACEUTICAL: Pressure Vessels, Process Piping.

OIL AND GAS: Platform Accommodation, Cable Trays.

MEDICAL: Surgical Instruments, Surgical Implants, MRI Scanners.

FOOD AND DRINK: Catering Equipment, Brewing, Distilling, Food Processing.

WATER: Water and Sewage Treatment, Water Tubing, Hot Water Tanks.

GENERAL: Springs, Fasteners (Bolts, Nuts and Washers), Wire.

GROVER

S.S. SHEETS

Specialist in **1mm** Thickness to **7mm** Thickness
Cold Rolled Patta
Also Deals in Stainless Steel 400 Series

विश्व विकास में स्टेनलैस स्टील का महत्वपूर्ण स्थान

प्रिय उद्यमी पाठकगण,

आपके साथ चलते चलते हम पन्द्रहवें वर्ष में प्रवेश कर चुके हैं और जनवरी 2015 का संस्करण अब आपके हाथों में है। इस अंक के साथ हम आपके सभी नये और प्रारम्भ से जुड़े उद्यमी पाठकों को नववर्ष की शुभकामनायें व निरंतर साथ जुड़ने के लिए धन्यवाद प्रस्तुत करते हैं।

इस संस्करण के ध्यैय की ओर बढ़ते हुए और इतने समय से आपके सम्पर्क में होते हुए हमने सदैव स्टेनलैस स्टील के उत्पाद, निर्माण व उपयोग के प्रसंग पर उपलब्ध ज्ञान के प्रचार व प्रसार की ही बात की है। जोकि वास्तव में एक विलक्षण धातु है और बड़ी आसानी से पुरानी धातुओं को अपने मार्ग से हटाता जा रहा है। आज स्थिति यह है कि सभी विकसित राष्ट्र अमेरिका, यूरोपिय देश, चीन, जापान, फ्रांस, भारत या यूं कहें पूरा विश्व स्टेनलैस स्टील के उपयोग के लिए अपनी आतुरता दर्शा रहा है, और इस धातु का विज्ञान तथा तकनीकी अभिलेखों ने जिस पर हमारी आधुनिक सभ्यता खड़ी है ने भी दृढ़ता से सराहा है।

आज स्टेनलैस स्टील उत्पादक व स्टेनलैस स्टील एप्लीकेशनों पर आश्रित समुदाय चाहे फेब्रीकेटर हो उत्पादक हो, आर्कीटेक्ट हो या फिर डिजाईनर सभी अनुभव कर रहे हैं की स्टेनलैस स्टील के बारे में उपलब्ध ज्ञान का प्रचार-प्रसार अन्तिम उपभोक्ता तक पहुंचाया जाए और सिर्फ यही परिश्रम स्टेनलैस स्टील के प्रयोग, उपयोग व खपत को बड़े पैमाने तक बढ़ाने में सहायक सिद्ध हो सकता है।

स्टेनलैस स्टील ने सभी धातुओं और एलॉयज को बेदखल कर दिया है और आज उसके सामने कोई स्पर्धा करने वाला मौजूद नहीं है। स्टेनलैस स्टील ने आधुनिक विकास में लगे धुरन्धरों, आधुनिक सभ्यता के निर्माताओं को शक्ति सम्पन्न बना दिया है और मनुष्य उसके रूप, गुण, लक्षण व विशेषताओं पर आसक्त हो चुके हैं। अब सिद्ध हो चुका है कि स्टेनलैस स्टील ही एक मात्र धातु है जो अन्य धातुओं के समक्ष आ रही है। मुसीबतों से छुटकारा दिलाने में और जिन कठिनाओं ने अन्य धातुओं को नकारा साबित कर दिया है हमारा तो यह मानना है कि स्टेनलैस स्टील आधुनिक सभ्यता का कवच है।

स्टील मार्केट इन्फो प्रचार-प्रसार की बी-2-बी व्यवसाय की एग्जिबिशन की प्रतिवर्ष की श्रृंखला में अपना 5वां स्टेनलैस स्टील हाउसवेयर शो 2015 आगामी 12-14 जुलाई को चैन्नई में अयोजन करने जा रहा है। आप भी अपने उत्पादनों का स्टॉल लेकर प्रदर्शन कर एक नई पहचान बना कर, व्यवसाय को गति प्रदान कर सकते हैं या विजिट कर निर्माताओं से सीधा सम्पर्क कर भी व्यापार को बढ़ा सकते हैं। इस अंक में भारत के स्टेनलैस स्टील उद्योग के अतीत वर्तमान व भविष्य की संक्षिप्त जानकारी दी गई, जो कि आपको भारत के स्टेनलैस स्टील के इतिहास का संक्षिप्त जानकारी प्रदान करेगा। हमेशा की तरह हमारे प्रकाशन पर आपकी प्रतिक्रियाओं का स्वागत है।

एकबार पुनः नववर्ष की शुभकामनाओं के साथ।

Importance of Stainless Steel for development

With season's greetings now "Steel Market Info" has completed 14th years of dedication to development of stainless steel and its applications through regular print editions and exhibitions. This is the first issue of 15th years for the month of January 2015. We always stand with your kind support in stainless steel developments through our publication. Stainless Steel take place of aluminium, copper, bronze and other materials in lot of segments. America, Europe, China, Japan, France and India also like stainless Steel very much. Presently Stainless steel becomes an important part of human life. Uses of Stainless Steel in large quantity against other materials throughout the world.

In this connection Steel Market Info is going to organize B2B business exhibition's 5th session from 12-14 July 2015 at Chennai. All member, producer, importers, exporters, traders may also take a part in 5th Stainless Steel Houseware Show at Chennai for expansion of your business relation. This edition is fulfil with past, present and future details regarding Stainless Steel. Now we can say this is a historical edition of Stainless Steel. We are awaiting your valuable suggestions.

Once again seasons greeting to all.

Our Speciality in Stainless Steel Dinner Set...

100+ Years of Stainless Steel and its Development in India

- By **Mr. N C Mathur** President ISSDA

Stainless steel was actually discovered to get rid of the rusting formed by moisture on the pipe of the guns, but very frequently it was used to manufacture medical equipments. Grade 304-316 of the stainless steel was used for the manufacturing of surgical equipments. Stainless steel was introduced in India in the same form. It was sent from Japan. The Japanese company Nipone was the first largest company to produce stainless steel. In India, aluminium, copper and bronze utensils were being produced in great quantity. A representative group from Japan visited India and gave training for making surgical equipments to 2-3 units in Chennai and made an agreement with the Indian Government that Japan would

provide grade 304 stainless steel sheets with little to no profit for the manufacturing of surgical equipments.

The government lifted the import duty on terms that only the license holders for manufacturing surgical equipments can import the sheets and they should be wholly used for the purpose of manufacturing surgical equipments only. Stainless steel was majorly used for manufacturing surgical equipments but the manufacturers came up with an idea to use it to make bowls, plates and glasses. But due to government terms the stainless steel can only be used for manufacturing surgical equipments only but still the manufacturing of stainless steel

utensils took place illegally. The stainless steel utensils were not accepted easily but later on they became useful. Indian utensil manufacturing company Devilal managed to convince the government to use the imported stainless steel sheets for manufacturing utensils and they were successful.

Devilal company started importing stainless steel sheets from the Japanese vendor Nipone and started the production of utensils in Mumbai. Later on, the surgical equipment unit also started manufacturing stainless steel utensils. Many units in Chennai now make stainless steel utensils in the name of surgical equipments. This is how stainless steel arrived in India.

A brief timeline of the evolution of stainless steel around the world

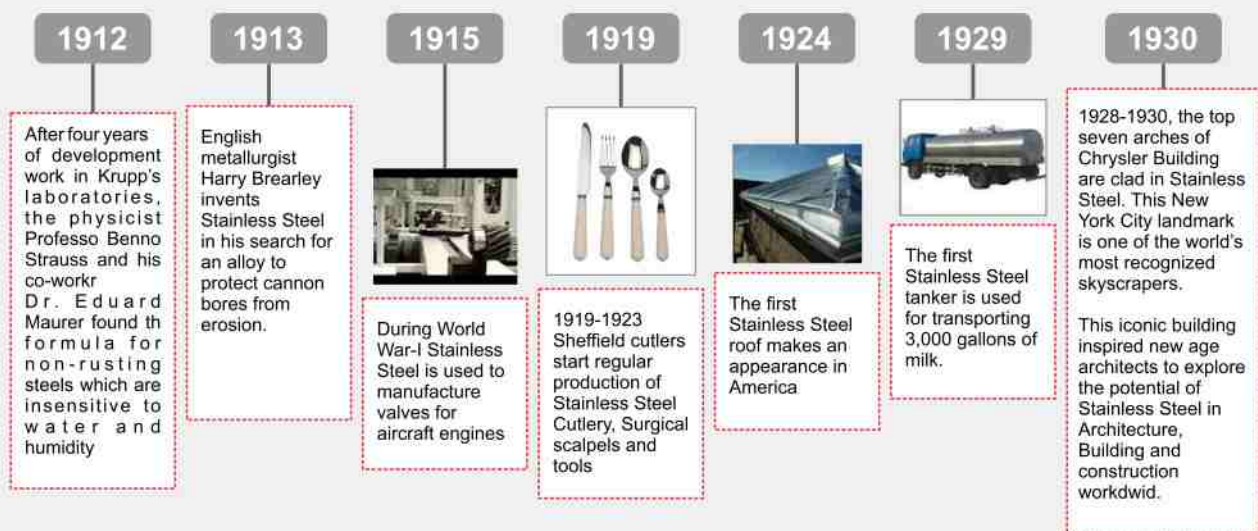

Fig. # 1

Evolution of Stainless Steel and its initial growth around the World

It was more than a hundred years ago that stainless steel as a material was discovered and commercially produced. It was a culmination of the efforts put by numerous scientists who researched with chromium alloyed steels. But it was not until the early decades of the 1900s that the first stainless steel was patented and manufactured.

Nothing could have started till in 1797 Nicolas-Louis Vauquelin discovered chromium. Although some progress was made with Chromium alloyed steels but only between 1904- 1911 Leon Alexandre Guillet published a research into iron, chromium and nickel alloys that today would be classed as stainless steel. Later in 1910-1911 Philipp Monnartz and William Borchers obtained a German patent for stainless steel. Monnartz published a Study of Iron-Chromium Alloys with Special

Consideration of their Resistance to Acids. He was the first to explain that stainless steel requires at least 12% chromium and a controlled amount of carbon.

The actual birth of Stainless steel has been attributed to following researchers. In 1912, while working for Krupp, Eduard Maurer and Benno Strauss are granted patents on two chromium-nickel stainless steels. The first alloy was a martensitic grade, while the second was an austenitic grade. In 1913, Harry Brearley discovered martensitic chromium stainless steel while seeking a corrosion-resistant alloy for gun barrels. Later he casted the first commercial martensitic chromium stainless steel. In 1915 Brearley obtains Canadian, French and US patents.

Later during 1919-1923 Sheffield cutlery started regular production of stainless steel cutlery, surgical scalpels and tools. Early stainless tableware

such as dishes and bowls also started to appear at this time.

From small beginnings a hundred years ago, stainless steel has grown to be an integral part of our lives. Utilized primarily for its corrosion resistance, stainless steel is also found in applications where strength, innovation and aesthetics are important.

The production volumes of stainless steels started picking up only in 1950s with introduction of hot and cold rolling facilities. Along with the increase in production a number of grades suiting to various environment and applications were also developed later classified into austenitic, ferritic, martensitic, duplex and PH grades. Each category has its unique characteristics associated with property of corrosion resistance. Today the modern stainless steel making facilities are capable to produce highest quality grades of stainless steel for applications in most stringent conditions.

A brief timeline of the evolution of stainless steel around the world

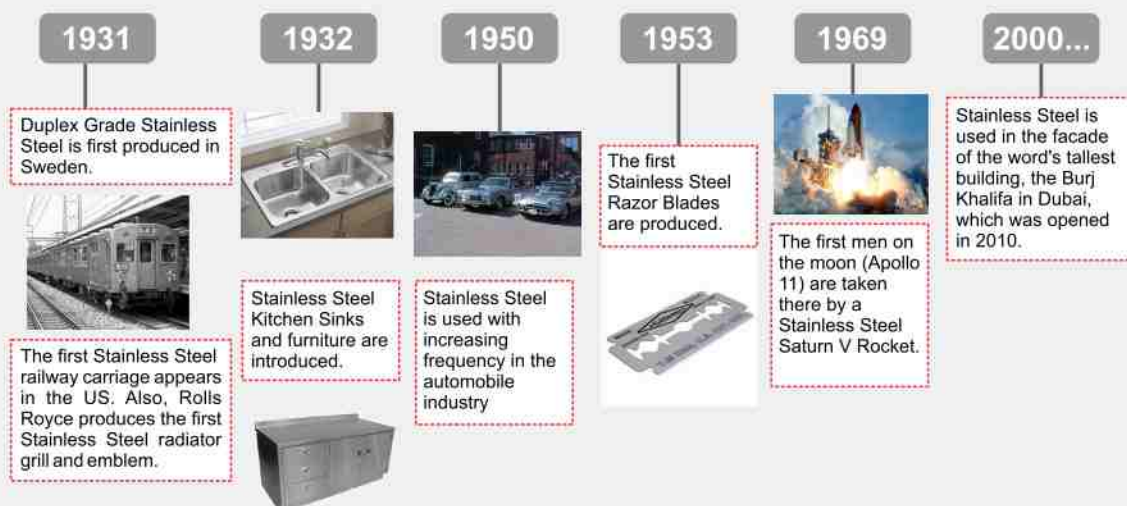

Fig. # 1

Overview of Stainless Steel Making Process

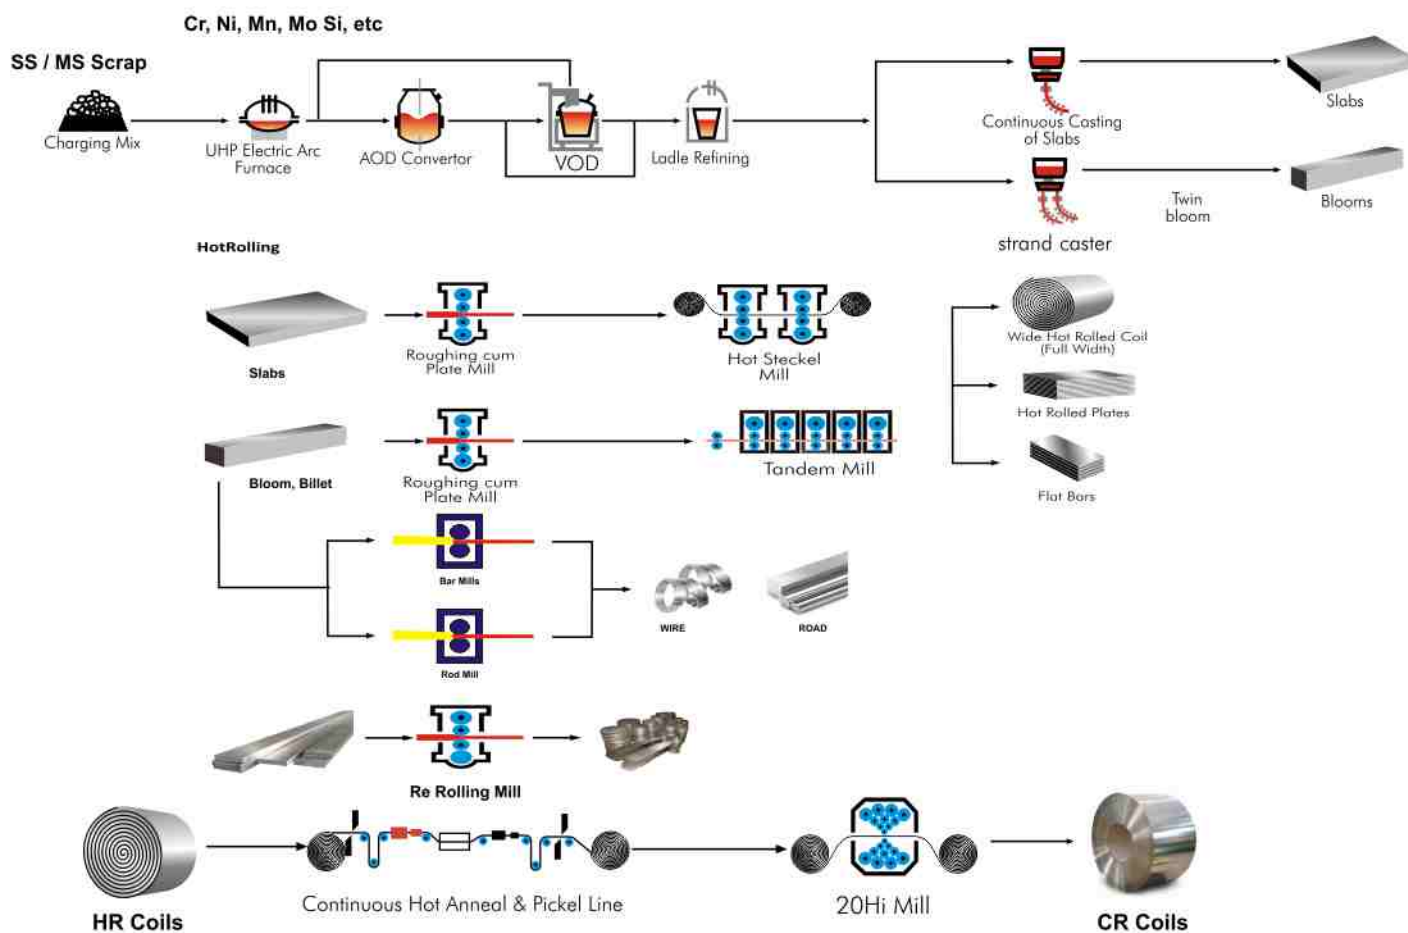

Fig. # 2

Initial Growth of Stainless Steel Industry in India

Though stainless steels were initially developed in the first quarter of last century, it was just four decades ago when stainless steel first production started in India and was primarily getting used for pots and pans in kitchen with some exception in engineering use. Till 1978, the production of stainless steel in the country was nil and most of the requirements were met through imports only. It was in 1978, ASP & VISL (Both a part of SAIL now) started producing plates, rounds and billets taking country domestic consumption to 18000 MT per

annum. Production picked up only in 1980s when new producers Bihar Alloy Steel and Jindal Strips (JSL now), G.M. Mittal (Rathi Alloys) entered into the business and started flat bar (called patta now) production suitable for re-rolling to sheets used for utensil industry. Availability of indigenously produced flats accentuated the emergence of new facilities for re rolling near Jagadhari, Jodhpur, Delhi and Ahmedabad. A small growth in domestic production started to get noticed which reach to 50,000 MT per Annum. Still the lack of indigenous cold rolling facilities to produce wider coils restricted the use of stainless steel to kitchen utensils only. It was only

in 1985 when SAIL (salem) plant started the first cold rolling unit in the country. The production touched 102,000 MT per annum and meanwhile growing demand for the use of stainless steel for utensils allowed to bloom and spread the 'patta' industry in other regions of the country specially in the state of Gujarat and Maharashtra.

During 1990 nickel prices increased sharply and it touched to 18000 US\$/MT and on the top of that there was a 55% import duty levied by government of India at that time. India being fully dependent on import on nickel and nickel still being an important element, since most of the production was in 304 grade stainless steel,

Historical Timeline of Indian Stainless Steel Growth

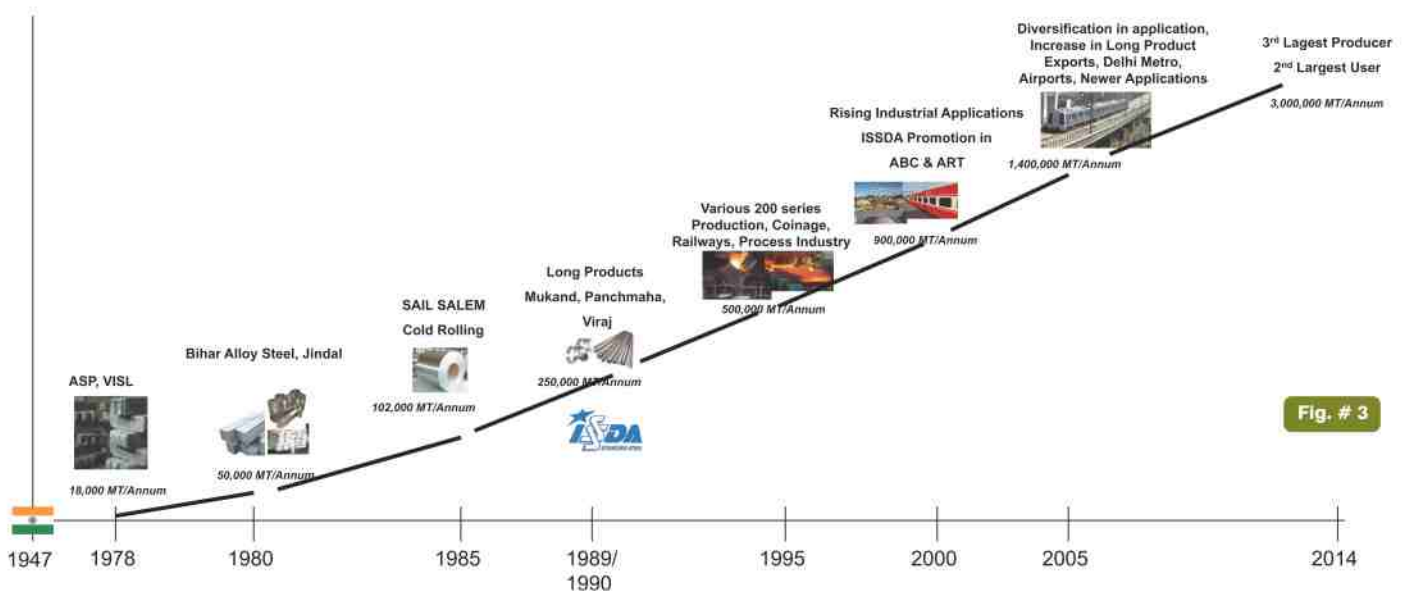

Fig. # 3

it was almost impossible to continue the growth of stainless steel in the country.

Meanwhile introduction of new technologies for processing stainless steels was coming up for faster and quality production of stainless steel all over the world. Upto mid 60's, the

stainless steels were manufactured mostly by Electric Arc Furnace – Ingot Casting - Slabbing and hot rolled to coil/sheets in hot strip/plate-sheet mills. The advent of technologies of AOD/VOD in 1990s allowed the Indian Producers to replace nickel with Manganese and Nitrogen still maintaining the

austenitic structure of stainless steel. Nickel price instability forced Indian producers to research and the birth of a variety of 200 series grades (low in nickel and high in Mn and Nitrogen austenitic stainless steel) took place. Till now, many new producers Mukund, Panchmahal, Facor, Viraj forayed into

History of Stainless Steel Production (tons)

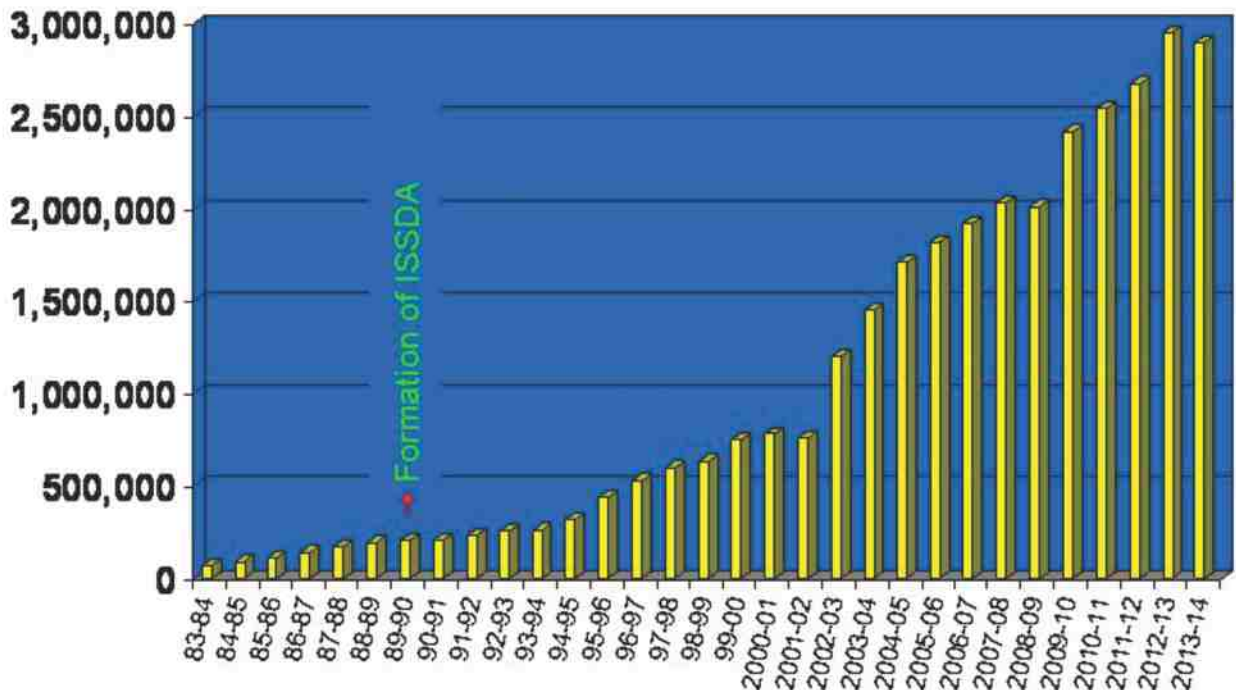

Fig. # 4

production of stainless steel long products and started their productions taking over total production of India to 250000 MT.

Although stainless steel industry was growing at a very steady rate in the country but till 1989-1990s more than 90 % of use was still in kitchen and related applications. Meanwhile, western and other developing countries started using stainless steel in more and more applications such as rail coaches, tankers for carrying liquids, pipelines for carrying oil, gas, liquids including potable water, various products for architecture, building and construction.

Initial Growth of Stainless Steel Industry in India

In 1988 representative of producers of stainless steel from India were visiting to London on invitation from Ni and Cr producers. At that point in time only four Stainless Steel Development Associations were exiting (Japan, Germany, Italy & South Africa). There has been a marked difference in the stainless

steel market development in these countries compared to others that made us think about India. We could feel that a neutral body with the sole purpose of developing a market has larger influence when compared with different organizations working in parallel to increase their market. The excitement paved the way and work started immediately after our return from the UK. Formally ISSDA was born in Nov 1989 as non-profit Organization after long debates and taking in to confidence key manufacturers (seven producers) of stainless steel. This was the time when India was producing meager quantities of stainless steel and nickel prices were hitting the roof. The challenge was tough and not much was in sight as to what could be the way to work on our mission. But we were determined to bring about a revolution in the Indian market. This was the time when the development of Cr-Mn 200 series stainless steel just started.

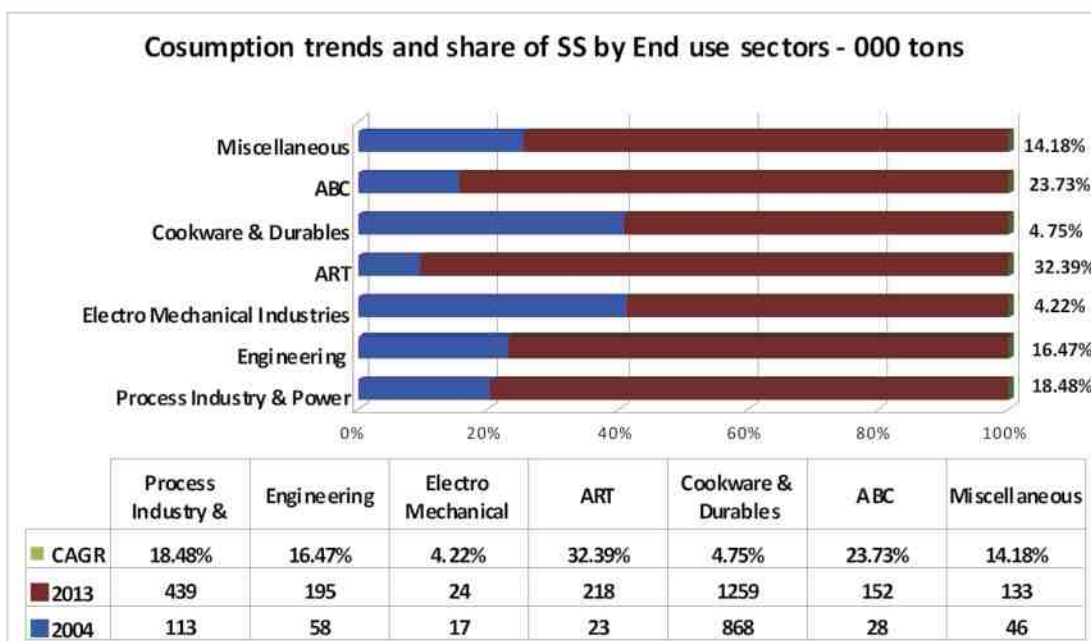

The main objective of ISSDA was to create awareness on the use of stainless steel and help in diversifying the usage of stainless steel in different sectors. ISSDA and its member companies

started its education and promotional activities educating everyone on how the long life on account of good corrosion resistance of stainless steel makes it suitable for many other applications since if wisely used the life cycle cost will result in long term good saving. In the last two decades, stainless steel has undergone a tremendous change in perception and production volumes in India. ISSDA has been successful in creating the awareness and changed the perception on stainless steel being seen as a material good only for kitchenware, it is now seen as a wonderful engineering material that lasts for decades and gives you value for money.

Today we see use of stainless not only in kitchen but in Indian Railways & Metro Rail Coaches, Wagons, tankers, various products for building & construction & process Industry but also in sectors such as Nuclear, Power, Oil & gas where high quality & grades that are indigenously produced, supplied and are being used.

The chart shows how in the last decade the end-use application of the stainless steel in the country evolved.

Fig. # 5

Present Production and Consumption trend of stainless steel by End Use Sector in India

The world Crude Stainless Steel production in 2013 is estimated over 38 million tons. The world production has grown at a CAGR of 5 % pa over the last 10 years. Asia has strongly emerged as both the world's largest stainless steel producer and user. Although China dominates the production of stainless steel accounting for more than 50% share of world production, India has been a part of this impressive growth with its production reaching 3 million tons in 2013 making it the 3th largest producer and 2nd largest user of stainless steel in the world. The average growth in India has recorded a CAGR of over 10 % over the last 10 years which is

more than a double the world average growth during the period.

The main Stainless Steel consuming segments can be classified into 6 to 7 broad categories e.g. Metal products, Process and Engineering industries products; Electro mechanical and electronics; Construction, Transportation and others including medical, blades, coins etc. Out of these Metal products, Process Industries and Engineering goods etc are relatively mature application areas whereas areas like construction and automobile are still evolving in the country and have great future potential for growth. Fig. 3 & Fig. 4 present the consumption patten of stainless steel flat and long products by major market sectors

respectively. Here it is worth noting that all sectors have increased their share of consumption at the expense of Metal good segment. Traditionally metal good sector including utensils and cookware has been the largest consuming sector of Stainless Steel in the country now accounting for 52% share of the overall consumption of stainless steel down from 75% in 2004. The single biggest contributor to this segment is the utensils/cookware which has grown at only 4.5% annually due to its already high level of penetration and its direct linkage with population growth. Almost 83% of the consumption of stainless steel in metal good sector is accounted by very low Nickel austenitic stainless steel flats popularly known as 'Patta'.

Consumption of Stainless Steel Flats (right) / Long (left) by End Use

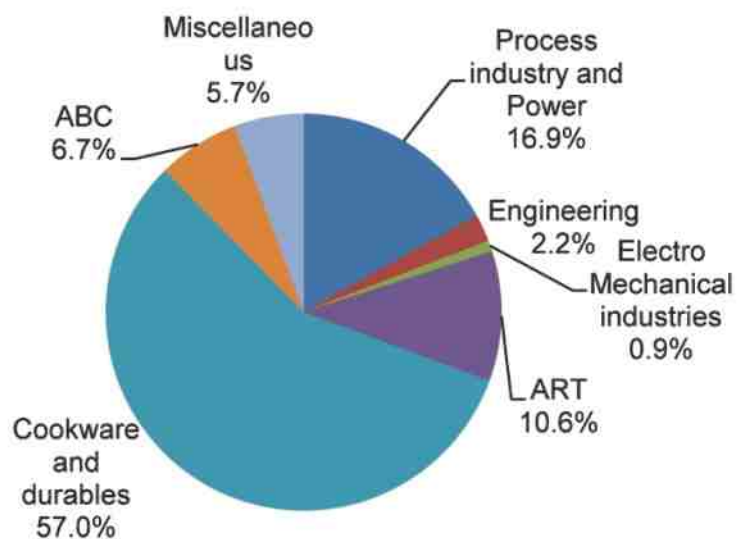

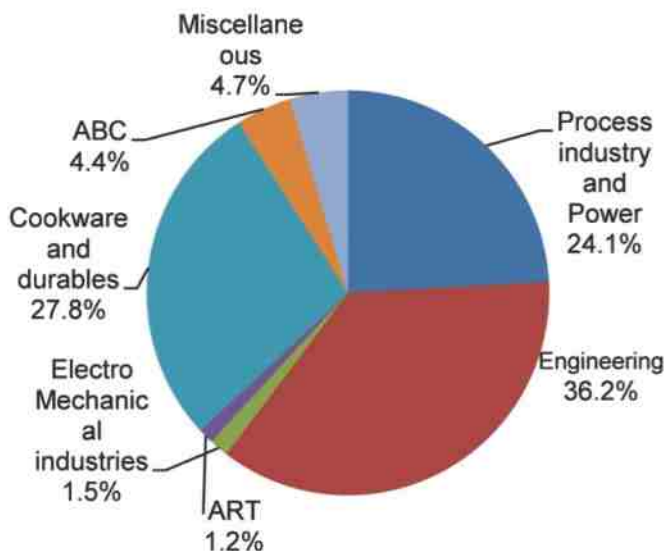

Fig. # 6

Fig. # 7

The automotive, railway and transport (ART) sector is now emerging as the fastest consumption segment of Stainless steel in the country. This segment has grown the fastest 32.39% over the last 8 years propelled by large requirements from railway wagon, coaches and automotive exhausts. The Indian automobile industry has grown rapidly in the past with India emerging as a major hub for small cars. All major international players are having their presence in India. Auto exhausts has been the major consumption segment for Stainless steel in this sector followed by disk brakes, cylinder head gaskets and exhaust manifold gaskets. Almost entire requirement for stainless steel to be used for auto sector in the country is of 409 L grade. Railways too have emerged as the largest consuming segment of Stainless Steel in the ART. Railways are procuring about 2500 coaches and 12000 wagons annually of stainless steel where a mix of 300 series and 400 series stainless steel grades are being used. This procurement cycle is expected to continue for next several years as the railways have plans to switch over to stainless steel for all its coaches for all luxury trains. Besides this there has been rapid growth in demand for

metro coaches in the country and is expected to grow manifolds.

One of the new emerging segments for stainless steel consumption is the architecture, building and construction (ABC) sector. The ABC sector is mostly driven by growth in Indian real estate sector consisting of residential real estate, commercial real estate, retail space, entertainment space, hospitality projects and SEZs. All high quality construction projects like retail outlets, shopping malls, multiplexes, Airports, Rail Metros, IT parks, Commercial Complexes, Hotels, Fast food restaurants, High Quality Residential accommodations, Hi tech townships and showrooms etc in the country today are finding big outlet for stainless steel in different ways and product forms such as Railings, Roofings, Barriers, signages, claddings and building facades. In all these construction, stainless steel is penetrating in place of conventional materials like steel, glass, plastics, aluminium composites etc.

Process industry historically has been consistent consumer of Stainless steel. Stainless steel is used in wide ranging process industries including Refineries, Petrochemical,

Chemicals, Dairy, Power, Textile, Sugar, Food processing, Distilleries, Fertilizer, Cement, Drugs, Paper and pulp and others. This sector mainly consumes 300 series grade of stainless steel. The process and engineering industry requirement has increased over the years and is tied with the health of the general economy and investments in projects. Major share of the consumption within process industry is accounted by Heat exchangers, pressure vessels, reactors and columns etc.

From being a very insignificant player in the world market about a decade ago to become world third largest producer the Indian market has demonstrated a steady growth in the past years. Maintaining this positive trend will require a lot of marketing and development activities. The efforts should be made to ensure that the use of Stainless Steel in infrastructure should be made mandatory by planning commission and specified in the standards. There is a need to create awareness among designers, specification writers about the benefits of stainless steel to reduce the level of ignorance about the material and thus, create new application areas using the life cycle cost benefits of specifying material.

स्टेनलेस स्टील की शताब्दी एवं इसकी भारत में विकास यात्रा

— एन. सी. माथुर (अध्यक्ष ISSDA)

स्टे

नलेस स्टील की खोज वास्तव में मनुष्य की जान लेने वाली बन्दूक की लोहे की नली में नमी व खारेपन से लग जाने वाले जंग से छुटकारा पाने के लिए की गई थी लेकिन शीघ्र ही इसका उपयोग मानव जीवन की रक्षा के लिए मेडिकल में ऑपरेशन के दौरान प्रयुक्त होने वाले सभी उपकरणों में होने लगा। ऑपरेशन उपकरणों में 304 से 316 ग्रेड के स्टेनलेस स्टील का उपयोग होता था। भारत में स्टेनलेस स्टील का आगमन इन्हीं उपकरणों के रूप में हुआ। जिसे जापान ने भारत में भेजा। जापान की निपोन कम्पनी स्टेनलेस स्टील बनाने वाली पहली बड़ी कम्पनी थी। भारत में एल्यूमिनीयम, तांबा, पीतल के बर्तनों का निर्माण अच्छी मात्रा में व शानदार तरीकों में होता था। जापान के एक प्रतिनिधि मण्डल ने भारत का दौरा किया और चैन्नई में दो-तीन इकाईयों को सर्जिकल इक्युपमेन्ट बनाने की ट्रेनिंग दी गई तथा भारत सरकार के साथ एक करार किया गया कि सर्जिकल इक्युपमेन्ट बनाने के लिए जापान 304 ग्रेड की शीट, नाम मात्र प्रोफिट के साथ जीवन रक्षक उपकरणों के निर्माण के लिए देगा और भारत सरकार ने भी आयात ड्यूटी नहीं लगाने का करार किया। लेकिन शर्त यह रखी गई कि जिस व्यक्ति के पास सर्जिकल इक्युपमेन्ट बनाने का लाईसेन्स हो वही आयात कर सकता है। उस समय बहुत सतर्कता बरती जाती थी कि वास्तव में इस शीट का सर्जिकल इक्युपमेंट में उपयोग हो रहा है या नहीं। यहां ज्यादातर ऑपरेशन इक्युपमेन्ट का निर्माण होता था, स्टेनलेस स्टील की सुन्दरता से सर्जिकल इक्युपमेन्ट बनाने वालों के दिमाग में आया कि क्यों नहीं हम इस का प्रयोग कटोरी, थाली, ग्लास आदि बनाने में करें। उस समय यह प्रतिबंधित शीट होती थी इसलिए चोरी छुपके थाली, ग्लास, कटोरी का निर्माण होने लगा। पहले लोगों ने उपयुक्त नहीं समझा लेकिन

धीरे धीरे चलन आरम्भ हो गया। भारत के स्टेनलेस स्टील के बर्तन बनाने वाले देवीलाल कम्पनी ने प्रयास कर सरकार से आयात के लिए सर्जिकल शब्द निकलवा दिया। निर्माता ही सिर्फ आयात कर सकता था देवीलाल ने जापान की निपोन कम्पनी से शीट आयात कर बहुत बर्तनों का निर्माण किया उस समय वह मुम्बई में थी। फिर सर्जिकल इक्युपमेन्ट बनाने वाली इकाई भी ये बर्तन बनाने लगी। चैन्नई में आज सर्जिकल इक्युपमेन्ट के नाम से कई इकाईयां बर्तन बनाती हैं। इस प्रकार भारत में स्टेनलेस स्टील का आगमन हुआ।

स्टेनलेस स्टील का संसार में प्रारंभिक विकास

लगभग 100 साल से भी अधिक समय पहले स्टेनलेस स्टील की खोज हुई और इसका व्यवसायिक उत्पादन शुरू हुआ। इसकी प्रकाष्ठा पर अनेकों वैज्ञानिकों ने शोध किया और इसका परिणाम उन्हे एलॉयड स्टील के रूप में मिला। सन् 1900 के प्रारंभिक दशकों में इसका पेटेंट और निर्माण नहीं था।

सन् 1797 में निकोलस लुइज वॉकेलिन ने क्रोमियम की खोज की। हालांकि सन् 1904 से सन् 1911 के दौर में इसमें कुछ प्रगति हुई और क्रोमियम एलोयड स्टील के साथ बनाया गया। इसी दौर में लियोस एलेक्जेंडर गुइस्ट ने लोहा, क्रोमियम और निकल के मिश्रण से शोध कर स्टेनलेस स्टील का निर्माण किया। इसके बाद सन् 1910-11 में फिलिप मोनार्टज और विलियम बॉर्शर ने स्टेनलेस स्टील के लिए जर्मनी में पेटेंट प्राप्त

किया। मोनार्ज ने एक शोध पत्र प्रकाशित किया जिसमें लोहा, क्रोमियम एलोयज के साथ प्रतिरोधक क्षमता के बारे में विचार प्रकट किये। वह पहले व्यक्ति थे जिन्होंने स्टेनलेस स्टील के कम से कम 12% क्रोमियम और कार्बन की निश्चित मात्रा की आवश्यकता पर व्याख्या की।

स्टेनलेस स्टील के वास्तविक निर्माण का सम्बन्ध कई शोधकर्ताओं से है। सन 1912 में एडवर्ड मोरर और बेल्नो स्ट्रॉस ने काम करते हुए दो क्रोमियम निकल पर पेटेंट प्राप्त किया। जबकि पहली मिश्रित धातु मार्टेन्सिटिक श्रेणी और दूसरी ऑस्टेन्टिक श्रेणी की थी। सन् 1913 में हेरी ब्रेरले ने मार्टेन्सिटिक क्रोमियम स्टेनलेस स्टील की खोज की जब बन्दूक की नली के लिए जंग रोधी धातु की जरूरत थी। अतः उन्होने प्रथम व्यवसायिक स्टेनलेस स्टील तैयार कर ही लिया। सन 1915 में ब्रेरले ने कनाडा, फ्रांस और से U.S. से पेटेंट प्राप्त करने में सफलता हासिल की।

सन 1919-1923 की अवधि में शेफिड कटलर ने स्टेनलेस स्टील के कटलरी, सर्जिकल उपकरण और औजार इत्यादि का नियमित उत्पादन शुरू किया। जल्द ही स्टेनलेस स्टील के टेबलवेयर (बर्तन) जैसे डिश, बॉउल इत्यादि का निर्माण भी शुरू हो गया जो आज भी जारी है। (रेखा चित्र: 1)

100 साल पहले की एक छोटी शुरुआत से स्टेनलेस स्टील मानव जीवन का एक अभिन्न हिस्सा बन गया है। आज के युग में स्टेनलेस स्टील का मानव जीवन में हर क्षेत्र में विभिन्न प्रकार से उपयोग होता है।

अधिक मात्रा में स्टेनलेस स्टील का उपयोग सन् 1950 के दशक से होने लगा जब गर्म और कॉल्ड रोलिंग की सुविधा की शुरुआत हुई। धीरे-धीरे इसके अनेक उपयोगों के लिए अनेक ग्रेड में वर्गीकृत किया गया। वातावरण के अनुरूप इसे ऑस्टेन्टिक, फेरिटिक,

मेरलेस्टिक, डुप्लेक्स और PH जैसी श्रेणियों में वर्गीकृत किया गया। इसकी एक अनूठी विशेषता यह रही कि प्रत्येक श्रेणी में जंग रोधी पाया गया। आज आधुनिक स्टेनलेस स्टील उच्चतम गुणवत्ता वाली श्रेणी का उत्पादन कहलाता है। (मिल उत्पाद बनाने की आसान प्रक्रिया भारत में स्टेनलेस स्टील उद्योग का प्रारम्भिक विकास, रेखा चित्र: 2)

भारत में स्टेनलेस स्टील उद्योग का प्रारम्भिक विकास

यद्यपि स्टेनलेस स्टील पिछली सदी की पहली तिमाही में विकसित हुआ है। हालांकि भारत में इसका उत्पादन कुछ अपवाद के साथ रसोई के कुछ बर्तनों के निर्माण से लगभग चार दशक पहले हुआ था। सन 1978 तक हमारे देश में स्टेनलेस स्टील का उत्पादन केवल नाममात्र का था और जरूरत के मुताबिक इसका आयात भी होता था। सन 1978 में (ASP और VISL) (दोनों स्टील ऑथोरिटी ऑफ इण्डिया के भाग) ने प्रतिवर्ष 18000 मेट्रिक टन उत्पादन घरेलु खपत के अनुसार शुरू किया। उत्पादन 1980 के दशक में और बढ़ा जब नये निर्माता के रूप में बिहार एलॉय स्टील और जिन्दल स्टीपस (JSL) जी.एम. मित्तल (Rathi Alloys) ने अपना कदम रखा और स्टेनलेस स्टील पट्टा निर्माण के साथ रि-रॉलिंग शीट का उपयोग बर्तन इकाईयों के उपयोग हेतु करना प्रारम्भ किया। रि-रॉलिंग पट्टा जगाधरी, जोधपुर, दिल्ली और अहमदाबाद में उपलब्ध होने लगा। तब से घरेलु उत्पादन में 50000 मेट्रिक टन प्रतिवर्ष का आंकड़ा पहुँच गया। स्वदेशी कोल्ड रोलिंग की सुविधा विस्तृत निर्माण प्रतिबंधित कॉयल का उपयोग स्टेनलेस स्टील के रसोई बर्तन बनाने के लिए स्टील ऑथोरिटी ऑफ इंडिया (Salem) ने देश में पहली इकाई 1985 में शुरू की। इसके बाद उत्पादन 102000 मेट्रिक टन प्रतिवर्ष पहुँच गया। इसके बाद पट्टा इकाई को अन्य क्षेत्रों में भी विशेषकर गुजरात व महाराष्ट्र में अनुमति दी जाने से और विकास हुआ।

वर्ष 1990 के दौरान निकल के भाव तेजी से बढ़े और लगभग 18000 US डॉलर प्रति मेट्रिक टन को छूने लगे तब भारत सरकार ने 55% आयात मुद्रा में छूट प्रदान की। तेजी से बढ़े इन भावों के कारण पूर्ण रूप से आयात पर निर्भरता बढ़ गई और स्टेनलेस स्टील व्यापार के देश में फलने फूलने पर संकट के बादल मण्डराने लगे। (भारतीय स्टेनलेस स्टील की ऐतिहासिक टाइम लाईन ग्रोथ, रेखा चित्र:3)

धीरे धीरे आधुनिक प्रणाली से स्टेनलेस स्टील निर्माण तेजी से गुणवत्तायुक्त उत्पादन होने लगा। 60 के दशक के मध्य तक स्टेनलेस स्टील इलेक्ट्रिक आर्क फर्नेस से ज्यादातर निर्मित किया गया। 1990 के दशक में AOD/VOD की प्रद्योगिकी के आगमन ने भारतीय निर्माताओं को मेगनीज और नाइट्रोजन स्टेनलेस स्टील को निकल से बदलने का अवसर दिया। निकल के मूल्य में अस्थिरता ने भारतीय निर्माताओं को शोध करने पर मजबूर किया जिसका परिणाम 200 श्रेणी ग्रेड की एक किस्म का जन्म हुआ। कई नये निर्माता जिनमें मुकुन्द, पंचमहल, फेसर विराज स्टेनलेस स्टील के लम्बे उत्पादों ने उत्पादन में कदम रखा और 25000 MT उत्पादन शुरू हुआ।

स्टेनलेस स्टील उद्योग देश में एक स्थिर गति से बढ़ रहा है। लेकिन 1989-1990 में 90% से अधिक स्टेनलेस स्टील का उपयोग रसोई व इससे संबंधित बर्तनों के निर्माण में हुआ। हालांकि पश्चिमी और अन्य विकसित देशों में स्टेनलेस स्टील का उपयोग अनेक रूप में किया जाने लगा जैसे रेल के डिब्बे, तेल टैंकर, गैस व तेल के लिए पाईपलाइन, पानी टैंकर, विभिन्न प्रकार के मॉडल, भवन निर्माण में उपयोग होने लगा है। (स्टेनलेस स्टील उत्पादन का इतिहास (टनो में), रेखा चित्र:4)

1988 में भारतीय स्टेनलेस स्टील निर्माताओं के प्रतिनिधि ने Ni और Cr के निमन्त्रण पर लन्दन का

दौरा किया। उस समय मात्र चार स्टेनलेस स्टील डवलपमेंट एसोशिएशन सामने आई जो जापान, जर्मनी, इटली और दक्षिण अफ्रीका की थी। इन देशों में आपस में तुलना करने पर स्टेनलेस स्टील व्यापार में खासा अन्तर नजर आया और हमें भारतीय स्टील बाजार के बारे में सोचने पर मजबूर किया। हमने अपने बाजार को बढ़ाने के लिए समानान्तर काम कर रहे विभिन्न संगठनों के साथ तुलना में जब एक बाजार विकसित करने के एक मात्र उद्देश्य के साथ प्रभाव महसूस किया। उत्साह का मार्ग प्रशस्त हुआ और ब्रिटेन से हमारी वापसी के तुरन्त बाद हमने इस पर सघन रूप से कार्य शुरू कर दिया। नवम्बर 1989 में ISSDA नामक नोन प्रॉफिट संगठन का गठन गहन विचार-विमर्श और लम्बी बहस के बाद किया गया। यह वह समय था जब भारत स्टेनलेस स्टील निर्माण का बहुत बड़ा केन्द्र था और निकल की कीमतें आसमान छू रही थी। हमारे मिशन के लिए यह एक कठिन चुनौती थी। हमें भारतीय स्टेनलेस स्टील उद्योग को जीवित रखना था। उस समय Cr-Mn की लगभग 200 श्रेणियों का विकास हुआ।

ISSDA का मुख्य उद्देश्य स्टेनलेस स्टील के उपयोग के प्रति जागरूकता पैदा करना और विभिन्न क्षेत्रों में स्टेनलेस स्टील के उपयोग में मदद करना था। ISSDA और इसकी सदस्य इकाईयों ने जागृति के लिए शैक्षिक गतिविधियों के माध्यम से आमजन को यह बताने का प्रयास किया कि स्टेनलेस स्टील का उपयोग किस तरह से किया जाना चाहिए और इसके क्या क्या फायदे हैं। पिछले दो दशकों में तो अभूतपूर्व बदलाव देखने को मिले हैं। ISSDA अपने मिशन में कामयाब रहा और यह साबित कर दिया कि स्टेनलेस स्टील न सिर्फ रसोई तक सीमित है। स्टेनलेस स्टील एक खूबसूरत इन्जीनियरिंग मेटेरियल है जो आपकी रकम का सही मूल्य देता है।

आज हम केवल रसोई घर तक सीमित नहीं रहे। भारतीय रेल व मेट्रो रेल कोच, वैगन, टैंकर, भवन एवं

निर्माण और परमाणु, पावर, ऑयल व गैस जहाँ उच्च गुणवत्ता वाले स्टेनलेस स्टील का उपयोग बहुतायत होने लगा है। यह सभी हमारे देश में निर्मित हो रहा है और यहीं खपत भी हो रहा है। (रेखा चित्र: 5)

भारत में अन्तिम उपयोग सेक्टर से स्टेनलेस स्टील उत्पादन व उपयोग की प्रवृत्ति

2013 में दुनिया में क्रूड स्टेनलेस स्टील का उत्पादन 3.8 करोड़ टन से अधिक होने का अनुमान है। पिछले 10 सालों में दुनिया भर में 5% तक CAGR में बढ़ोतरी देखी गई थी। एशिया दुनिया का सबसे बड़ा स्टेनलेस स्टील निर्माता व उपयोगकर्ता है। चीन भी विश्व में स्टेनलेस स्टील उत्पादन का 50% से अधिक का उत्पादन कर रहा है। वहीं भारत 2013 में 3 लाख टन तक पहुंच गया। इस प्रकार विश्व में भारत तीसरा सबसे बड़ा निर्माता और दूसरा सबसे बड़ा उपयोगकर्ता बन गया है। भारत में औसत वृद्धि दर के CAGR अनुसार 10% पिछले 10 वर्षों में रहा है।

मूल रूप से खपत को 6-7 व्यापक श्रेणियों में बांटा जा सकता है। जैसे- धातु उत्पाद, प्रक्रिया और इंजीनियरिंग उद्योगों के उत्पाद, इलेक्ट्रो मेकेनिकल - इलेक्ट्रॉनिक, कंस्ट्रक्शन, ट्रांसपोर्टेशन, मेडिकल, सिक्के इत्यादि। इसके अलावा मेटल उत्पाद, प्रक्रिया व इण्डस्ट्रीज के इंजीनियरिंग सामग्री इत्यादि भी मुख्य है। साथ ही परम्परागत रूप से बर्तन और कुकवेयर का देश में स्टेनलेस स्टील का सबसे ज्यादा उपयोग हो रहा है जो कि सम्पूर्ण स्टेनलेस स्टील खपत का 75% में से 52% भाग है। केवल आज बर्तन / कुकवेयर में 4.5% की बढ़ोतरी हुई वहीं तकरीबन 87% स्टेनलेस स्टील की खपत पट्टा उद्योग पूरी करता है। (स्टेनलेस स्टील फ्लेट्स / लॉंग्स की खपत रेखा चित्र:06)

देश में ओटोमोटिव, रेलवे व ट्रांसपोर्ट (ART) क्षेत्र में स्टेनलेस स्टील खपत में तेजी से विस्तार हो रहा है। पिछले 8 सालों में इस क्षेत्र में 32.39% तक की बढ़ोतरी दर्ज की गई है भारतीय ओटोमोबाइल उद्योग में भी स्टेनलेस स्टील की खपत बढ़ रही है। क्यों कि भारत छोटी कारों का विशाल हब बन गया है। ऑटोमोबाइल उद्योग में स्टेनलेस स्टील की खपत ब्रेक डिस्क, सिलेण्डर हेड गार्केट इत्यादि। अधिकांशतः ऑटोमोबाइल्स सेक्टर में 409L ग्रेड का स्टेनलेस स्टील काम में लिया जाता है। रेलवे भी खुद जो अपने आप में बहुत बड़ा स्टेनलेस स्टील का उपयोगकर्ता है औसतन 2500 रेलडिब्बे और 12000 मालगाड़ी के डिब्बों का निर्माण करने में 300 और 400 सिरीज ग्रेड का स्टेनलेस स्टील काम में लिया जाता है। रेलवे नए बनने वाले लक्जरी कोचों के निर्माण में भी स्टेनलेस स्टील का ही पूर्ण रूप से उपयोग कर रहा है। इसी के साथ मेट्रो रेलवे कोचों की मांग भी दिनों दिन बढ़ती जा रही है और अधिक मांग बढ़ने की सम्भावना है। हाल ही में स्टेनलेस स्टील का उपयोग आर्किटेक्चर, भवन, निर्माण में भी होने लगा है। इस क्षेत्र में तेजी से ग्रोथ हो रहा है। जिसमें रहवासीय रीयल एस्टेट, कॉमर्शियल रीयल एस्टेट, रिटेल स्पेस, मनोरंजन स्पेस, हॉस्पिटललिटी प्रोजेक्ट्स और सेज इत्यादि मुख्य है। उच्च श्रेणी के सभी निर्माण जैसे रिटेल आउटलेट्स, शॉपिंग मॉल्स, मल्टीप्लेक्स, एयरपोर्ट, रेल मोटर्स, आईटी पार्क कॉमर्शियल कॉम्प्लेक्स, होटल्स, फास्ट फूड रेस्टोरेन्ट, टाउनशिप, शॉरूम इत्यादि में विभिन्न प्रकार के उपकरण या वस्तुएं स्टेनलेस स्टील की पाई जाती हैं जिनमें रेलिंग, रूफिंग, बेरियर्स, साइनबोर्ड, इत्यादि अन्य कई वस्तुएं फर्निचर वगैरह सभी कुछ स्टेनलेस स्टील का पाया जाता है।

इण्डस्ट्री का प्रोसेस: स्टेनलेस स्टील का उपयोग बड़े पैमाने पर होने लगा है जिनमें औद्योगिक इकाईयां, रिफाइनरियां, पेट्रो केमिकल्स, डेयरी, पावर, टेक्सटाइल्स, सुगर, फूड प्रोसेसिंग, फर्टिलाजर,

सीमेन्ट उद्योग इत्यादि सभी स्टेनलेस स्टील पर निर्भर नजर आते हैं। इन सेक्टरों में लगभग 300 सीरिज ग्रेड का स्टेनलेस स्टील प्रयुक्त होता है। स्टेनलेस स्टील का इस प्रकार उपयोग एक ऐतिहासिक उपयोग कहलाता है तथा सामान्य अर्थव्यवस्था से भी जुड़ा हुआ है।

एक दशक पूर्व दुनिया के तीसरे सबसे बड़े उत्पादक भारतीय स्टेनलेस स्टील बाजार ने वृद्धि दर्ज कराने में

सफलता प्राप्त की। इसी ट्रेण्ड को बरकरार रखने के लिए कई प्रयत्न और नए शोध करने की जरूरत पेश आती है। इसके साथ ही यह भी प्रयास किये जा रहे हैं कि जागरूकता लाने के साथ साथ विभिन्न डिजाइनों और उन उत्पादों के फायदों के बारे में भी साधारण तरीके से जानकारी उपलब्ध कराई जा सके और समय की मांग और आपूर्ति के अनुरूप नई डिजाइनों पर विशेष ध्यान देने तथा इसकी लागत कम रखने की कोशिश की जाती है।

Vertical lift

The Spanish company MP supplied and installed the lifts for the luxury Club "La Stejarii", the most outstanding project of its kind in Bucarest, Romania.

Stejarii Club is a multifunctional sports complex with an impressive and innovative design. This leisure installation has a 21,000 m² constructed surface in 3 different levels. These levels are connected using the MP vertical transport Gearless M^{PGO}!, it has no machine room and it can be completely customized. Another feature is the unique low energy consumption hydraulic lift which is flexible and adapts both for new buildings as well as for refurbishments, it is made completely of crystal glass and stainless steel, with a singular design.

This exceptional lift is placed in the middle of the main room of the complex. Its configuration is completely customized for Stejarii's wishes. Its crystal glass and stainless steel car is intended to be a benchmark design in the lifts sector.

Born on 11th September 1944 at Jodhpur. Graduated with B. Tech (Hons.) from India's leading University - Birla Institute of Technology and Science (BITS), Pilani in 1966. 1st President of students union in 1964 when BITS became an independent University. Worked in India with leading Industrial

Houses for over 48 years (17 years with the Birla Group and for 31 years with Jindals) and has been associated with Stainless Steel Industry for last 38 years.

President of Indian Stainless Steel Development Association (ISSDA), the market development arm of the industry. Chairman of Steel Furnace Association of India.

Associated for 10 years with the "Market Development Committee" as well as "Economics & Statistics Committee" of ISSF (International Stainless Steel Forum), a global Stainless Steel Industry Association based in Brussels, Europe.

Invited to speak in global Stainless Steel, Nickel and Ferro Alloys Conferences worldwide since 1994. Presented papers in over 30 International events organized by Metal Bulletin, CRU, SMR, ISSF,

Stainless Steel Associations in China, Russia, Japan, S. Korea UK, EU, USA, Brazil, Australia, Thailand, Malaysia, Singapore, and South Africa.

Under Mr. Mathur's leadership ISSDA has occupied high reputation with Government of India Ministries and BIS, as the Technical and Market Development arm of the Industry. ISSDA celebrated 25th year Anniversary with a grand event in Delhi in November 2014

Mr. Mathur received The "Stainless Steel UDYOG RATNA AWARD" in Sept. 2009 from the ALL INDIA STAINLESS STEEL INDUSTRIES ASSN. Mumbai during its 42nd AGM. He is the first recipient as an Individual Professional of this prestigious Award for his contribution for the Stainless Steel Industry.

World's Stainless Steel Dignities - What say about N.C. Mathur !

You are one of the very few personalities that make this industry special. Your knowledge and experience in second to nobody, not only from an Indian perspective, but a global perspective since you always connected the Indian stainless industry with the world. You remember that I always introduced you at our conferences as the 'ambassador of the Indian stainless steel industry' - I think a title that describes you best.

Grateful to have you - and your family - as a friend.

Kind regards,
Markus moll, Managing director, SMR, Austria

My Dear Nirmal

Congratulations! I am so very proud of you. You have achieved Celebrity Status in our industry, both for your interesting and sought after talks to the industry, but also because of your legendary market development efforts.

Salute you on this significant anniversary, I salute your absolute dedication to our industry and your genuine love for what you do and for those whose lives you touch.

With my kindest personal regards,

John Rowe, Secretary General, International Stainless Steel Forum

Dear Nirmal

Congratulations; there are not so many people in our industry who can pride themselves of such a track record. The experience and the personal contacts, which you have built up over the years, are a treasure that is valuable to the world stainless steel community.

Best regards,

EURO INOX, Thomas Pauly,
Managing Director, Brussels.

Nirmal,

Congratulations on this important milestone on behalf of the Nickel Institute. We thank you and ISSDA for the great work you have done to advance the use of stainless steel in India.

Best regards,

President, Nickel Institute
Belgium

Congratulations for your 38 years involvement with stainless steel! Also our company has a similar life-time in stainless now and so it is showing for how long we have enjoyed contacts with you.

We would be interested to know more about the report on India + stainless you plan to publish shortly. Kindly put us on the list for information!

With best regards and wishes. Also from Heinz and Gerhard,

We remain
Beatrix Pariser-Nowak, Germany

Dear Mr Mathur

Congratulations! You were one of the first names I noticed in my lists when I arrived here ten years ago and I am very glad you are still on my lists and I have had the opportunity to meet you! I do hope you will stay for at least another 10 years!!

With my very best regards

Jo CLAES (Ms)

The Stainless Steel Link was officially launched by a grand ceremony

The Stainless Steel Link was officially launched by a grand ceremony held at The Taj Mahal Hotel on 21st November 2014. It was a ceremony well attended by representative of Stainless steel industry from all over India. In addition to the launch ceremony, the event boasted to wonderful management teachings from the events Key note speaker Dr Radhakrishnan Pillai. The audiences were simply awed to hear the age old wisdom of Guru Chanakya put so simply by Mr Pillai. The audience found the Chanakya Neeti not only soothing to the ears but wonderful in application in day to day life as well.

The audience had unexpected learning's about modern retails from the panel discussion between Mr. Aslam Karmali (Ceo Consumer Division – India & International Retail – Eureka Forbes Ltd), Mr. Neelesh Rangwani (FabFurnish.com), Mr. Robert Roh (Vice President Star CJ – TV Network) , Mr. Sanjeev Mahuli (Business Head Non Food - Reliance Retail), Mr. Sharad Kumar Saraf (Director –Technokraft Industries , India Limited). The excellent moderation by Mr. Bhushan Lawande contributed significantly to the quality of discussion.

The guest of honor, Mr Abhudaya Jindal - Promoter Jindal Steel made an excellent presentation about how India is facing stiff competition from overseas countries and how we should all come together and tackle this challenge head on.

Executive Members from ISDO made a wonderful presentation inviting everyone INDINOX 2015 The event culminated by a wonderful opportunity for everyone to network in addition to the sumptuous food.

ISSDA Celebrates 25 Year Anniversary

Mr N C Mathur, President, ISSDA along with other speakers of Inaugural Session in the Conference

Indian Stainless Steel Development Association, representing leading stainless steel producers and various intermediary industry and users of stainless steel in the country, celebrated 25 successful years of formation in a grand event held in Delhi on 6-7th November 2014. This event was attended by more than 200 delegates comprising leaders from stainless steel industry, chrome, nickel and molybdenum industry.

The event was a crowning moment of the collective hard work, dedication and focused effort of the association and its member companies in diversifying the applications of stainless steel in India and

increasing usage volumes in the country.

Distinguished speakers of the Session One "(L-R) Mr Pramod Kumar, General Manager, Rail Coach Factory, Mr Neeraj R Kochhar, Chairman & Managing Director, Viraj Profiles Ltd, Mr N C Mathur, President, ISSDA, Ar. KalhanMattoo, Founder, Planet 3 Studios Architecture, Mr Yogesh Agarwal, Managing Director, Rimjhim Ispat Ltd and Vijay Sharma, Vice President, Sales & Marketing, Jindal Stainless Limited."

In his welcome address, Mr N C Mathur, President, ISSDA talked about the history of

formation of the Indian Stainless Steel Development Association (ISSDA) which came into being with the objective of diversifying and expanding the domestic market for stainless steel. He reminded the audience of the efforts put by ISSDA and its member companies in transforming the stainless steel production & usage in India which had a production of just about 200,000 tonnes of stainless steel 2 decades ago, primarily for the kitchenware market and has reached to nearly 3 million tones production and 2.4 million tons of consumption in 2013-14 positioning India as the second largest producer and third largest consumer of stainless

Distinguished speakers of the Session One (L-R) Mr Pramod Kumar, General Manager, Rail Coach Factory, Mr Neeraj R Kochhar, Chairman & Managing Director, Viraj Profiles Ltd, Mr N C Mathur, President, ISSDA, Ar. KalhanMattoo, Founder, Planet 3 Studios Architecture, Mr Yogesh Agarwal, Managing Director, Rimjhim Ispat Ltd and Vijay Sharma, Vice President, Sales & Marketing, Jindal Stainless Limited.

steel in the world. Mr Mathur also said "I am glad that we are celebrating our 25th anniversary, when the Indian government is making serious efforts to improve economic condition and support investment initiatives in the various sectors by pursuing policies of 'Make in India' and promoting exports through 'Made in India'." He also stressed on the fact that India's per capita consumption of SS is far below the world average and India's GDP is likely to increase in the near future and major gainers will be Architecture Building & Construction, Automotive Railways & Transport and Process/ Power industries.

The guest of honor for the conference, Mr Syedain Abassi, Joint Secretary, Ministry of Steel & Chairman, JPC also congratulated the Industry for their successes and assured full support of the ministry to strengthen the growth of stainless industry.

During the event, concerns were raised of rising import and dumping of stainless steel in India affecting the domestic stainless steel industries.

Speaking on the occasion Mr. Rattan Jindal, Chairman and Managing Director, Jindal Stainless Limited said, "As imports already control over 40% of the domestic market and quarter by quarter

dumping from countries like China and FTA countries continue to increase. The result of this surge is that today domestic industry which has installed capacity of around 4.5 million tons is operating at just 55% of its capacity and is struggling for its survival". Various other leading producers also raised the same concerns.

The keynote speaker of the conference was Mr Markus Moll, MD, SMR – Steel and Metals Market Research and his presentation "Stainless Steel Strategy 2020 : The Indian Way, the Chinese Way ...or a Third Way" was the highlight of the event.

Mr Rattan Jindal, Chairman & Managing Director, Jindal Stainless Ltd. (Centre) receiving the memento from Mr Syedain Abbasi

Mr. Neeraj R Kochhar, Chairman & Managing Director, Viraj Profiles Ltd. (Centre) receiving the memento from Mr Markus Moll

The keynote speaker of the conference Mr Markus Moll, MD, SMR - Steel & Metals Market Research

Mr Syedain Abbasi, Joint Secretary, Ministry of Steel, was the guest of honour

Several experts from various user sectors representing nuclear industry, petrochemical industry, Desalination & waste water management industry, Construction sector and kitchen & hollowware industry spoke on the potential usage, challenges and offered deep insight on the likely growth areas of stainless steel in their respective sectors.

ISSDA also recognized two Industry leaders, Mr. Rattan Jindal, CMD, Jindal Stainless Ltd and Mr. Neeraj R Kochhar, CMD, Viraj Profiles Ltd., for their outstanding contribution to the stainless steel industry.

ISSDA thanked all its members and participants from around the world for the grand success of this programme.

ISSDA is the technical and market development arm of the Indian Stainless Steel Industry and has close relations with Nickel Institute, stainless steel development associations (SSDAs) in other countries, the International Stainless Steel Forum (ISSF), the International Chromium Development Association (ICDA) and the International Molybdenum Association (IMOA).

Spinning Process for Utensils

Spinning sheet metal on the lathe is an excellent means for quickly producing seamless round hollow metal forms. With the help of a lever force is applied uniformly to the rotating sheet metal over the desired form (mandrel) at very high rpms, thus the sheet metal is deformed evenly without any wrinkling or warble.

SPINNING PROCESS

Spinning process is used for making cup or cone shaped articles which are axisymmetrical i.e. rotationally symmetrical hollow shape sheet metal parts. In this process a circular blank of sheet metal is clamped between the mandrel and the tailstock of a lathe-type spinning machine. Mandrel is corresponding to the shape and size of metal part. Both mandrel and blank are rotated by the main drive. The metal disc and the mandrel rotate together and the spinning roller makes contact with the outer face of the work piece. This is explained in Fig.1 below.

In spinning process tension

and compression, both the forces, play their roles since tangential compressive and radial tensile stresses are generated in the deformation zone just as in deep drawing.

This metal spinning technique can be applied to produce a wide variety of hollow parts of widely differing shapes, all without compromising the significant benefits of metal forming. All these features make spinning an economical and highly flexible process.

Some of the items that can be produced by spinning process include: Cones, cups, tumblers, Cylinders and drums, Funnels and horns, Baskets, basins, bowls, Bottoms for tanks, hoppers, and kettles, Canopies, caps, and canisters.

METALS

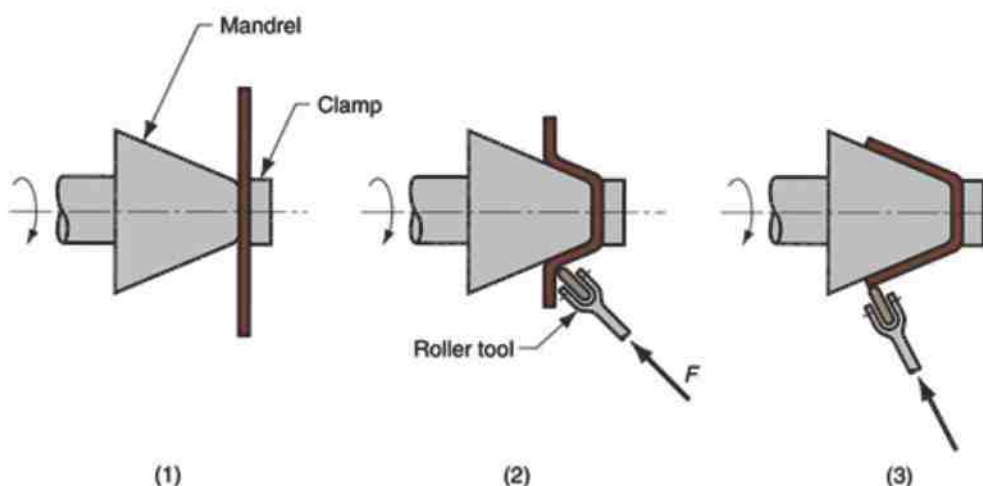

Almost every metal that is available in sheet form may be spun. However, a few metals are ideally suited to the art of spinning.

Aluminium is fantastically elastic and easy to form so

long as it has been annealed.

Stainless steel is even more elastic (stretching before tearing) than aluminium but requires significantly more force to form. All the austenitic, ferritic and precipitation hardening stainless steels can be formed by spinning process. However the Austenitic range (200-300 series) of stainless steels form best. Type 201 and 301 are the best grades of stainless steel for spinning as these are having the greatest elongation and also the work hardening characteristics. Similarly, the mild steels with lower carbon content are the easier to form.

Copper has excellent elongation (very formable) and doubles its tensile strength when work hardened, but if it hardens before the part is finished then the part must be annealed to prevent shearing and cracking. Brass is a copper-zinc alloy and has similar properties to copper in its formability but brass work hardens less and requires more force.

ADVANTAGES OF METAL SPINNING: Metal Spinning offers numerous advantages over other metal forming processes.

MATERIAL YIELDS:

Material yield in spinning process is increased since it uses thinner plate material and the resulting spun product requires little or no machining to finish. Material waste is minimum resulting in significant savings

LOWER TOOLING COST:

Metal spinning mandrels, or chucks, are simpler and less costly. Spinning offers significant savings on the cost and initial tooling investment.

Improved tensile strength:

Due to the pressures and forces being exerted on the material in the spinning process, the component becomes 'work-hardened' i.e. it enhances the material's tensile properties. This in turn it increases the life of the component whilst providing a more light weight, reliable and robust product.

Comparison with deep drawing:

In comparison with deep drawing the spinning process has the following features:

- a) The tooling cost would be reduced for larger components in spinning process.
- b) High accuracy obtained in spinning process.

c) Good surface finish occurred in the products obtained from the spinning process.

d) For small products to be produced in large quantities spinning is not economical

e) The failures of components are low in spinning process and high in deep drawing

f) Machinery and tooling set for spinning process is simple.

g) The mechanical properties of raw material gets increased by 2 to 2.5 times in spinning process than deep drawing.

INTERNATIONAL TRADING & SOURCING OF SCRAP, SECONDS & PRIME METALS WORLDWIDE.

Akjay International LLC., founded in 2005 is one of the fast growing enterprises in the field of International Trade. Through our vision, hard work and commitment to customer satisfaction we have been successful in establishing ourselves as one of the most trusted name in the field of international trading and sourcing.

OUR STRENGTH

- Solid trading experience
- Superior customer service
- Timely delivery and export services
- Ability to develop new businesses and enter new markets.
- Firm commitments
- Indian associate office

OUR PRODUCT RANGE FOR SALE TO INDIA:

FERROUS SCRAP

- HMS
- Plates and Structural scrap
- Shredded steel scrap
- Busheling
- Cast iron
- HMS Rebar scrap
- Cast iron rotors and drums

NON- FERROUS SCRAP

- Stainless Steel Scrap
- Aluminum Scrap
- Brass scrap
- Copper Scrap
- Zinc Scrap
- Lead Scrap
- Meatballs (Shredded Pickings)
- Zorba
- Electric Motors
- ICW
- Alternators
- Starters
- Cat shells Outer shells SS 409

STEEL AND STAINLESS STEEL PRODUCTS (Prime and Secondary)

- Coils
- Sheets
- Plates
- Pipes
- Wire Rods
- Strips

f he magic of a clear night sky filled with stars has inspired many creative souls. Now, through a collaboration between science and art, a stainless steel sculpture installed at the Australian National University in Canberra brings new depth to the connection between ourselves and the stars above.

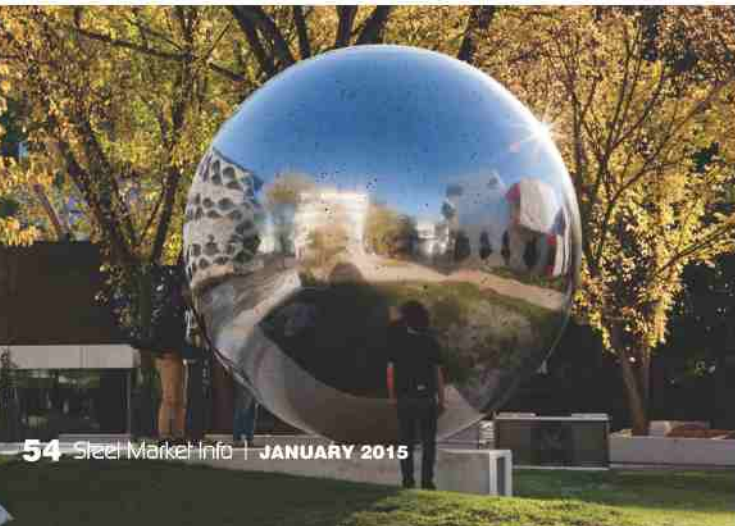

The 4 metre diameter, mirror-polished stainless steel sphere (called UNA), which sits in the science precinct at ANU, is so much more than first meets the eye. Designed by UK artist Wolfgang Buttress, UNA features 9,100 laser-cut perforations, which were mapped in collaboration with ANU astrophysicist Dr Daniel Bayliss.

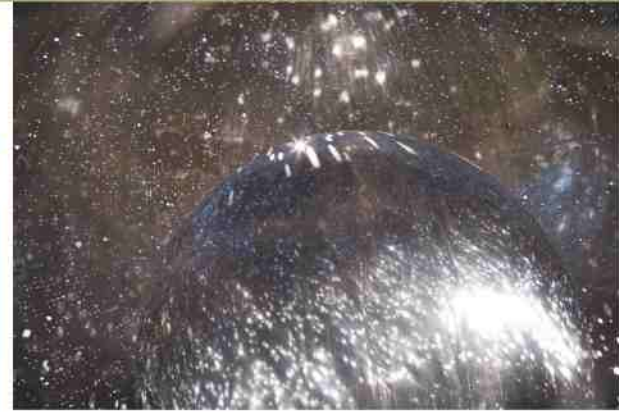

The holes match the 9,100 stars that we can see with the naked eye from Earth and vary in size according to the brightness of the stars in the night sky (the brighter the star, the larger the hole).

Inside the sphere sits a second, two metre diameter mirror polished, stainless steel sphere. When viewed through one of the outer perforations, the internal sphere reflects small points of light from the outer sphere, creating, according to Mr Buttress, a microcosm of our perceived night sky.

“One makes connections to one self and the stars above. We are all made from stardust,” he said.

Star Light, Star Bright

The magic enters a different realm at night, thanks to the fibre optic lights that sit in the centre of the two spheres, casting a glow through the perforations.

Mr Buttress said the use of stainless steel and high quality fabrication were integral to the success of the project.

Aside from the ability to be mirror polished, he said stainless steel was specified due to its strength, resilience and, if maintained properly, the fact that it will look as good in 50 years as it does now.

The spheres incorporate around 2000kg of 4mm 316L, 2B finish stainless steel, which was supplied in 24 pieces by ASSDA Major Sponsor Sandvik Materials Technology (now Vulcan Stainless). The pieces were laser cut to shape in-house on one of Sandvik's four laser machines. Sandvik VIC/TAS State Manager Stephen Orridge said each hole was unique in its shape and the work involved about 40 hours of programming.

The sheet was pressed by Dished & Flanged Ends to create the curved forms for both the inner and outer spheres. ASSDA Member and Accredited Fabricator NRG Piping then

joined and welded each segment with only 1mm tolerance, followed by polishing. NRG Piping co-ordinated the fabrication, transport and installation of UNA.

Mr Buttress said the welding had to be done carefully to minimise distortion as all would be seen when it was mirror polished.

"There is nowhere to hide. NRG Piping are amazing fabricators as they totally understand the properties and essence of stainless steel," he said.

Because the inner sphere had to be positioned inside the outer sphere during the fabrication process, a 600mm hole at the base allowed enough room for a welder to get access inside to polish out the internal welds.

The end result is one of the artist's favourite pieces that he has created. "By day, the inner world is revealed on close inspection and at night it has a different character as light pours out of her like a beacon. It works on a micro and macro level, at day and by night. It was a great marriage between art, architecture and engineering," Mr Buttress said.

Cold Forming Is Shaping The Future for Stainless

as a method of manufacturing precision components, cold forming has dipped under the radar of many engineers. However, the development of cold forming stainless steel looks set to revolutionise the way this material is manufactured, says Mark Jennings, Technical Director at Dawson Shanahan.

Cold forming has long been established as a method for producing simple, high volume components such as fasteners quickly and cost effectively. Increasingly though, this process is being used to produce high precision components from a range of advanced engineered metals. More significantly, a new technique has now been developed by Dawson Shanahan enabling the production of cold formed austenitic and martensitic stainless steels that virtually eliminates galling. This manufacturing breakthrough has offered new opportunities and benefits for component manufacturers operating in a diverse range of sectors, from aerospace and automotive engineering through to medical, electronic and optical instruments. Unlike the traditional energy intensive, time consuming, wasteful or even hazardous methods of shaping metal, cold forming, is a particularly simple process that produces metal components at low ambient temperatures without removing any material.

Precision pressure

A typical cold forming press uses coiled wire at room temperature that is then cut to length then using advanced mould and die sets,

combined with extremely high levels of applied pressure (in excess of 600 tonnes), and extruded to the desired shape. By working with the material and eliminating the need for trimming and cutting, cold forming can cut waste by up to 80% in comparison with traditional machining processes.

Faster output, lower energy consumption

As cold forming is carried out at ambient temperatures, this high speed process can be completed 15 times faster than more conventional options, significantly saving on production time. As a result, components can be made precisely to order extremely quickly, cutting lead times and the need to

store high volumes of spare parts on site. Another, perhaps more obvious, advantage of producing components at ambient temperatures is the significant reduction in energy consumption, helping to reduce costs still further, as well as carbon footprint. Indeed, these benefits can help lower the costs of components by as much as 70% in many instances.

Stronger, smoother parts

Just as importantly, the cold forming process can improve the mechanical properties, with a finished part 18% stronger than that of machined components. Unlike machining where sections are usually cut across the grain structure of the metal, the direction of forming and the geometry of the part is aligned with that of the grain. In addition, finished parts can have complex internal and external geometries, with exceptionally smooth surface finish, so that only minimal secondary processing is needed.

This offers the potential for design engineers to specify components to a higher specification and provide that competitive edge in performance.

Stainless steel components

While the technique has long been used with other advanced engineering metals such as copper, aluminium and brass, the inherent strength of stainless steel has been something of a stumbling block for the cold forming process. For engineers today, there is now an alternative to more conventional processes using a safe cold forming technique developed by Dawson Shanahan. This latest innovative development now means that stainless steel, as well as other exotic metals such as titanium, can be cold formed using a specialised metallic

lubrication and extrusion coating avoiding the need for hazardous chemical solutions. This unique shell, created by the research and development team at Dawson Shanahan, eliminates the problem of galling, to prevent damage being caused to the components and tooling, which often presents itself in the form of scores or surface imperfections, thus maintaining consistent quality in finished parts. In fact, this new technique has been endorsed by independent laboratory test results, which show that this ground-breaking process retains all the mechanical properties of stainless steel without any detrimental effect on performance.

The advantages of this new process will be of particular benefit to those areas of industry requiring robust, ultra-high precision parts, including laser applications, where cold formed nozzles significantly increase cutting accuracy, or in industrial engines where the parts are used to boost overall reliability, while cutting CO₂ and particulate emissions. Equally, other stainless steel components made through cold forming, such as diesel injectors for example, are generally more reliable especially when used with biofuels, as these fuels can place greater stresses on conventionally manufactured parts.

With growing demands from industry, combined with the need to reduce wastage rates and energy consumption for both economic and environmental reasons, an increasing number of manufacturers are looking to adopt more efficient and cost effective methods of producing stainless steel components. This new development in cold forming looks set to revolutionise the way stainless steel components are manufactured in the future, by using a more sustainable and responsible approach.

The Art Of Recycling A Completely Recyclable Material

among the main characteristics of stainless steels, we can include their complete recyclability. Stainless steels do not produce any environmental pollution at the end their lifecycle, and are destined to become scrap metal. A company based in the province of Brescia, developed the idea to recycle the waste and the surplus resulting from stainless steel production processes, and opened a special division called "Inoxcart". In this division, the processing waste of EN 1.4301 (AISI 304) stainless steel is reused to create minimalistic objects characterized by a clean,

smooth and essential design inspiring to the simplest geometrical shapes. These objects are ennobled by the typical characteristics of the material then oriLmate from: solidity and robustness, along with resistance to corrosion, and particularly, corrosion produced by atmospheric agents. These objects enclose functionality, strength, and cost effectiveness within the stainless steel recycling chain, and therefore, respect for the environment that surrounds them.

MADE IN INDIA

An ever-changing masterpiece

If a building becomes architecture, then it is art. (Arne Jacobson)

London's architect Zaha Hadid, famous for her stunning designs, had a clear vision for the Eli and Edythe Broad Art Museum on the East Lansing campus of Michigan State University. She wanted "...a structure that changes as visitors move past and through it – creating great curiosity...". Her desire to echo the surroundings

with a skin made of a series of pleats needed a material that could express her vision. Stainless steel's reflectivity and its ability to be molded and bent to any shape proved to be the perfect solution.

Defining the questions

Designing and constructing a world-class art museum poses many challenges, and requires collaboration and cooperation of many parties, each with different priorities. One of the issues was façade material selection. There were several questions the team had to consider with respect to stainless steel as a candidate.

Would it be the right material? Could a stainless steel exterior be built within the available budget? What grade of stainless steel should be used? To help answer these questions the design build team invited Zahner, an architectural fabricator, well versed in the manufacture of stainless steel façades, and other outside consultants to support the project.

Developing the answers

Alloy and surface finish selection –

For a stainless steel façade it was important to select the correct grade to ensure low maintenance and a long life. Because the museum would be exposed to East Lansing's road and walkway de-icing salts, the design team chose the molybdenum-containing Type 316L (UNS S31603) grade. With an Angel Hair® finish, this grade also had the desired appearance: a relative gloss several levels lower than other grades, producing a softer, more consistent and more

attractive finish.

Feasibility demonstration – The outside consultants argued that stainless steel would be too expensive, could not be welded, and could not develop the design's sharp pleats. They suggested instead a composite structure for the façade. However, the fabricator, who has helped to construct some of the most striking stainless steel buildings in the United States, produced several large-scale stainless-steel mockups of the pleats and welds. These educational and strikingly beautiful mockups demonstrated that stainless steel would fulfill the architect's vision and even exceed everyone's expectations.

Other teams produced alternative façade mockups of aluminum composite panels with a silver paint coating and non-welded joints. There simply was no comparison between these and the stainless steel

design. The design team recognized that the Type 316L stainless steel, fabricated as proposed by Zahner, would have much greater impact. The stainless steel could be welded and assembled to create

sharp angular planes as if the entire building were machined from a block of gleaming metal, making it a beautiful, iconic sculpture on the campus. One additional significant benefit of the choice of 316L was that at the building's end of useful life, the stainless steel could be fully recycled. In contrast, a composite façade could not be completely recycled.

Panel fabrication – The 316L stainless steel pleats were made from 1.5 mm thick sheets that were custom V-cut to create the pleats. The fabricator used a specially designed mill with an accuracy of 0.005 mm to make these cuts. The formed stainless steel sheets were strong enough that they required no backup support. Each pleat was made of several formed panels, using in total 970 unique panels. The end panels of each pleat were fusion welded using Type 316L wire, argon shielding gas and copper heat sinks to eliminate distortion. These measures kept the weld cleanup and passivation to a minimum.

A breathtaking result

Michigan State University is very pleased. The Eli and Edythe Broad Art Museum is an incredible, iconic building. Thanks to the choice of 316L stainless steel, keeping it stunningly beautiful requires only a fresh water rinse in the spring and autumn. For years to come, passersby will be drawn towards this piece of art. (WZ) Angel

Jindal Stainless launches first of its kind Stainless Steel Modular Toilets

Stainless Steel modular toilets to provide thrust to Swachh Bharat Abhiyaan
Convenient and durable, can last for 25 years or more with minimal maintenance

Mew Delhi, 9th December 2014: Providing an impetus to Government's Swachh Bharat Abhiyaan, Jindal Architecture Ltd., a subsidiary of Jindal Stainless Ltd. has announced the introduction of economical, eco-friendly, durable and convenient stainless steel modular toilets, as part of its expanding product range. The 100% recyclable toilets are available in a range of single units and as community toilets of six and eight units, respectively. These toilets have the option of being upgraded to automated bio-toilets.

Emphasizing on the need of modular stainless steel toilets in India, Mr Anuj Jain, CEO, Jindal Architecture Limited said, "Human waste disposal is an ever-growing, perennial problem

arousing aesthetic inhibitions, together with the threat of infectious diseases due to the contamination of groundwater. Less than 30% of Indians presently have access to toilets. In rural regions, only 10% of houses have toilets, with the rest resorting to open defecation. Although people in cities have better infrastructure facilities, nevertheless, here also just 70% have access to toilets. This increases mortality rates because untreated waste causes diarrhoea, amoebiasis, cholera, typhoid and other dangerous diseases that threaten the lives of lakhs of children and their families."

Open defecation is one of the main causes of diarrhoea, causing the annual deaths of

more than 750,000 children less than five years of age. [1] Significantly, many of these deaths occur in India, where almost 30 million schoolchildren lack access to toilets. As many as 595 million Indians practice open defecation daily – almost 45% of the populace.

Stainless steel modular toilets provide an appropriate solution for this longstanding problem. In terms of structural strength, product life, maintenance, hygiene, eco-friendliness and scrap value, stainless steel toilets have proved to be better than fibre, mild steel or brick-and-mortar toilets. Due to the modular design, the toilets can be assembled on site, saving time and transportation costs.

Weather resistant and with PVD-coated interiors, they can be installed easily at government schools, hospitals, tourist places, pilgrim centres, marketplaces, public auditoriums and fairs, railway stations and bus stands.

Most importantly, these are competitively priced against fibre or brick-and-mortar toilets – a single-unit toilet costs Rs.99,999 onwards, while the community toilets which are six units start from Rs. 3.99 lakhs and eight unit starting from Rs. 4.99. The disposal tanks cost approximately Rs59,000 per unit. Moreover, a bio-digester tank solution is being jointly developed with the DRDE, Railways and RDSO, which will solve hygiene issues on railway tracks and areas around them by converting human waste into gases and water with the help of specially-developed anaerobic bacteria that survive on such waste.

As part of this initiative of the government and as a responsible corporate, Mr Anuj Jain said, “As corporate citizens, we should seriously consider our responsibilities and focus our CSR initiatives in eliminating the practice of open defecation. This can be achieved by creating awareness to trigger behavioural changes that end such unhealthy practices. Towards this goal, Jindal Stainless has

developed India's first stainless steel modular toilets with bio-disposable tanks, focussing on areas where accessibility to toilets and waste disposal is abysmal.”

About Jindal Stainless Limited

Jindal Stainless, a part of the \$18 billion USD, OP Jindal group is the largest integrated manufacturer of stainless steel in India and is ranked among the top 10 stainless steel manufacturers in the world, with a capacity of 1.8 million tons. JSL has crafted its success story by fully integrating its operations based on a strategy of both,

backward and forward integration, starting from mining, melting, casting, hot rolling to cold rolling and further value additions. An ISO: 14001 compliant, JSL product range includes: Ferro Alloys, Stainless Steel Slabs, Blooms, Hot Rolled Coils, Plates and Cold Rolled Coils/ Sheets, Stainless Steel Strips for Razor Blade

Steel and Coin Blanks for mints in India & EU.

A Pioneer and Leader In Metal Finishing Machines

G Grind Master is happy to be a Gold Sponsor at INDINOX 2015 which is a Mega Event at Ahmedabad.

Grind Master, a pioneer and leader in metal finishing machines, boasts of "The Widest Range" of belt grinding & polishing machines for Cookware, Stainless Steel Tubes & Bars. Started in 1984 Grind Master has state of the art design and manufacturing facility spread over 100,000 sq. Ft., a motivated team of 200 and more than 4000 machines across 6 continents.

India has a large number of stainless steel sheets, tubes, bars & cookware manufacturers. Grinding and Polishing are extremely important processes which add the value to all these products. Grind Master is offering world class machines for polishing stainless steel to various finishes. Our Indian stainless steel Industry can immensely benefit from Grind Master's in depth

knowledge of various polishing processes and consumables so as to achieve desired polishing results in shortest possible time and optimum cost.

INDINOX has given the right platform to show case these technologies. The visitors of INDINOX can witness the demo of following machines at INDINOX.

1. Cookware Polishing Machines-From simple semi-automatic double ended machines to fully automatic rotary indexing type polishing machine. Further, we have implemented robotic loading / unloading of the pot on our rotary indexing machine which polishes 200 pots per hour without any operator.

2. Tube Polishing Machines - Grind Master offers widest range of centreless machines for polishing round tubes and bars, from low cost LMCL and GCL models to

**Rotary Indexing

highly sophisticated FH series models with fully automatic job size setting and loading / unloading. Our centreless machines are very easy to set for different tube sizes and very user friendly. The running cost on our machine is found to be lower than competing machines. We have shown better finishing results with lesser no. of polishing heads, thereby achieving a big saving in electric power cost

3. Descaling / Grinding and Polishing of wire rods and Bright bars- Grind Master offers multi head Centreless Belt Grinding and Polishing Machines for round bars. From the raw black bar, you can get ground and finished bright bar on this machine. The process of belt grinding removes the surface defects at much higher speeds as compared to the conventional wheel grinding. VSM Ceramic belts for roughing and compact grain belts for finishing give

highly consistent finishing results. With this machine, you can cost effectively achieve finishes up to 0.12 Ra and h9 tolerance

Stainless Steel Sheet finishing – Grindmaster in collaboration with Timesavers, Holland offers a range of sheet grinding and finishing machines for achieving No. 4 finish. We offer dry as well as wet finishing machines for stainless steel sheets and also offer coil to coil grinding and finishing lines.

Grind Master has proven track record of introducing automation in several grinding and polishing applications. A Grind Master solution is characterized by design led innovation supported by a robust organization and strong service.

A result of absolute Engineering with passion !

Grind Master bags "SME of the Year"

Grind Master is the Proud Recipient of the "SME of the Year" Award in the Emerging India Awards 2014, presented by ICICI and CNBC. The awards were presented at a ceremony in Mumbai on Saturday 13/ 12/ 2014. Grind Master Also received the Award for "Engineering and Capital Goods Vertical, and Nomination for "Women Entrepreneur of the Year".

Grind Master is one of the few machine tool builders from India competing on a Global level with Japanese and German companies, supplying Mission Critical Microfinishing Machines to Global Automotive OEMs such as Shanghai General Motors, SAIL, Renault Nissan, Kirloskar Toyota, SGMW and Great Wall. With "Widest Range of Metal Finishing Machinery in the World", Grind Master has developed home grown technology and know how. Mr. Milind Kelkar, after receiving the award said "We are proud to build International Standard Products with blood, sweat and tears. This award is dedicated to what I believe is the finest machine building team in the country".

2014 has been an excellent year for Expanding our Business and Technologies. With Successes such as the Setup of Grind Master China Office, and Technical Collaboration with SAMP Italy, "SME of the Year" Award is like an icing on the cake. With Imtex 2015 around the corner and many new Product Launches, there is a lot to look forward to in 2015.

Public Sanitation Facilities in Stainless Steel The Need of the Hour

a comprehensive, affordable, sustainable and hygienic solution aimed to cater to the basic and diverse sanitation needs of the common man is the need of the hour. A country of the size of India with huge population and rapidly expanding cities has been lacking in the public sanitation facilities at all fronts. Though the efforts have been made in past to build and improve upon yet the problems on account of difficulty in maintenance, periodic breakdowns and maintaining a standard of hygiene, when using conventional kind of sanitation facilities, has remained a challenge for successive governments.

Under this context, Eram Scientific Solutions (ESS), a home grown social enterprise based in Kerala, has introduced toilets which effectively addresses the challenges faced at sanitation front. Having identified the dimension of issues prevalent in sanitation, ESS has ensured the soundness and reliability of the innovation by integrating new technologies and better materials at affordable cost for catalyzing better hygiene and sanitation practices.

eToilets are built of Stainless Steel enclosures and have electronic systems for enhancing user experience and for tracking the health status of these toilets. eToilets have automated access control systems, sensor enabled water minimization, self-washing and floor wash mechanisms.

The custom-sized Stainless Steel enclosures are extremely durable, corrosion-resistant and are unswerving in the long run.

the squatting pan. The P-trap also helps to prevent foul smell inside the toilets and thus ensures cleanliness round the clock. Unlike the ceramic or plastic closets, the SS closet structure is strong enough to withstand heavy weight and major damages. One eToilet SS Model weighs approximately 310 Kgs. the squatting pan. The P-trap also helps to prevent foul smell inside the toilets and thus ensures cleanliness round the clock. Unlike the ceramic or plastic closets, the SS closet structure is strong enough to withstand heavy weight and major damages. One eToilet SS Model weighs approximately 310 Kgs.

Benefits of Stainless Steel Structure

1. Robust structure
2. Ease of assembly at field
3. Aesthetics and high ambience
4. Highly modular
5. Withstand extreme weather in Indian context
6. Ensures serviceability and ease of cleaning
7. Environment-friendly
8. Sustainable in coastal areas

Besides offering a menu of most modern technology options the eToilet has a facility of pre-flushing before entering, automatic flushing once usage is done, in-built water tanks, sensors for water and electricity conservation, automatic platform, cleaning and power back-up with coin operated entry. Keeping in mind individual needs these toilets are programmed to flush 1.5 litres of water after three minutes of usage or 4.5 litres if usage is longer. The performance status of the units can also be monitored via web using GPRS connectivity of the units. This innovation involves unmanned operations and thus ensures easy and continual operation of the toilets while minimizing unnecessary maintenance costs.

via web using GPRS connectivity of the units. This innovation involves unmanned operations and thus ensures easy and continual operation of the toilets while minimizing unnecessary maintenance costs.

School Model eToilets :

Considering the sanitation grounds in India, it is quite obvious that the existing sanitation amenities prevailing in schools have largely failed to deliver and promote a sustainable sanitation model especially in capacities of sustenance, health and hygiene for the students.

Rethinking traditional CSR guidelines, ONGC has set an example through the implementation of it in a local school in Malappuram District in Kerala. ONGC has set up 3 eToilets in Government Higher Secondary School Karuvarakundu, the only government run school

in this village in Malappuram. Home to 4096 students and 110 staffs, the school has come under the limelight with this social intervention undertaken by ONGC.

Now since the newly elected government in India has taken a pledge to build and improve on public sanitation facilities as a tribute to Great Mahatma Gandhi whose 150th birth anniversary will be celebrated in 2019 under Mahatma Gandhi Clean India Programme. It is most likely that efforts will be made to install more and more of extremely durable and maintenance free sanitation facilities around the country.

"DRAGON": The Legend Comes To Life

In the handwork shown in this article, stainless steel becomes a key element. Its dual function as a structural part and an aesthetic element, gives this sculpture of light a strong and impressive visual impact.

The chosen figure represents the mythical Chinese Dragon. The stainless steel structure is covered with Murano glass scales and LED strips arranged all along the contour of the sculpture.

The shape of the dragon is outlined on a super-

mirror finish, 1.5 mm thick, EN 1.4301 (AISI 304) stainless steel sheet. This wall lamp is 4 m. high, and 2,5 m wide. When the LED strips light up, as their colours are continuously changing, the Dragon seems to take on a life of its own, aided by the high reflecting capacity of the steel.

STATELY SLIDE

ormerly owned by the Anglo-American Astor family, Cliveden House is located about 40 kilometers to the west of London. Situated high above the River Thames and surrounded by wooded countryside, this stately home has a colourful history dating back to the 1600s. Today, the house and grounds are a major tourist venue—attracting visitors from all around the world. The estate now belongs to the National Trust and the house has been a luxury hotel since 1985.

To help fund restoration work to the large terrace which runs the length of the south side of the house, a temporary pay-to-ride slide was installed in 2013. From August 2013 until November 2014 the slide took youngsters, and the young at heart, from the terrace at

the back of Cliveden House down to the huge lawns and formal flower gardens.

The slide is made of nickel-containing Type 304 (UNS S30400) stainless steel in order to resist the weather and to always retain a clean, shiny appearance. The "wavy" slide is 7.5m high, 22m long and weighs about 3900kg. It is wide enough to accommodate four side-by-side tracks. The 2mm thick stainless steel was cut, formed and welded by Steel Line, U.K. with great care and attention to detail in order to minimize joints, eliminate rough edges and sharp corners and ensure a smooth, oxidation-free appearance.

Due to the restoration work on the terrace, the slide had to be moved. It easily endured this re-location.

Type 304 is a good material choice for playground equipment and outdoor furniture in most settings, as illustrated by this beautiful slide at Cliveden House. Seaside locations, or urban locations where road salt is used, would require more corrosion-resistant alloys such as nickel-containing Type 316 (UNS S31600) or Type 2205 (UNS S32205).

Type 304 is a good material choice for playground equipment and outdoor furniture in most settings, as illustrated by this beautiful slide at Cliveden House. Stainless Steel Deep Drawing: A Complex Process Ensuring High Performances.

The deep drawing process, a typical stainless steel cold-forming method, allows to transform a flat sheet into a concave one keeping its thickness unchanged. The materials used for this process are traditional austenitic stainless steels, such as EN 1.4301 (AISI 304) and EN 1.4404 (AISI 316L) grades, of thicknesses ranging from 0.8 to 4.0 mm. More complex products require, instead, AISI 304DDQ (deep drawing quality) and EN 1.4303 (AISI 305) grades. Due the considerable plastic deformations it is submitted to, the material structure tends to harden, passing from an austenitic to a martensitic structure. This transition makes the material increasingly brittle, since it loses the characteristics of

ductility required by the process. Therefore, between the forming stages, a special heat treatment called "annealing" is carried out in a special oven, in which the elements to be treated are heated at a temperature exceeding 1020°. Then the parts are cooled. This process allows to reduce the presence of welds, thereby ensuring improved mechanical properties and better washability to the parts. The deep drawing process is used in several industrial applications and sectors, which include the catering, medical, and aeronautics industries, as well and the furniture and lighting industries.

Stainless steel industry needs government support

Lower capacity utilisation and competition with Chinese imports is feared dent the country's stainless steel industry, industry players have said.

Currently, the stainless steel sector in the country operates at about 55 per cent capacity utilisation of the total installed capacity of 5 million tonnes per annum (mtpa).

"Stainless steel sector requires government support in the form of encouragement for exports and import restrictions on finished or semi-finished goods," said Ratan Jindal, chairman of Jindal Steel

during a media interaction here. Raising the issue of increasing dependence on imports and under-utilisation of production capacities, Jindal said, "Our imports of stainless steel have doubled in the last year"

Financial institutions have the bank exposure of about 30,000 crore to the sector. According to him, in recent years, stainless steel has found applications in areas other than the utensils.

"Stainless steel is used in consumer durables such as washing machines, fridges, ovens as well as entire kitchens. What we are aiming

is to increase India's per capita stainless steel consumption from 1.6 kg a year to that of some of the developed nations."

Europe has an average per capita stainless steel consumption of about 10 kg, China consumes about 6 kg, and Taiwan about 15 kg. "With Prime Minister Narendra Modi's vision of setting up 100 smart cities in the country, stainless steel consumption will get a boost. But for that policy support will also be required," he said.

Stainless Steel Production Reaches 30.9 Million Metric Tons in The First Nine Months of 2014

Stainless and heat-resisting melt shop steel production [000 metric tons]

The International Stainless Steel Forum (ISSF) has released figures for the first nine months of 2014 showing that stainless steel melt shop production increased by 8.9% year-on-year to 30.9 million metric tons (mmt). Production increased in all regions except for Central and Eastern Europe.

Region	Quarter			+/- % q-o-q	9 Months		+/- % y-o-y
	1/2014	2/2014	3/2014		2013	2014	
Western Europe/Africa	2,164	2,111	1,682	-20.3%	5,683	5,958	4.8%
Central/Eastern Europe	71	72	70	-2.3%	215	213	-1.0%
The Americas	670	717	711	-0.8%	1,824	2,097	15.0%
Asia (w/o China)	2,234	2,216	2,161	-2.5%	6,487	6,611	1.9%
China	5,084	5,603	5,336	-4.8%	14,176	16,022	13.0%

Source: International Stainless Steel Forum (ISSF) Published: 19/12/2014 Last modified: 19/12/2014

Stainless Steel in Agricultural Applications

The International Stainless Steel Forum (ISSF) has launched a new publication on Stainless Steel in Agricultural Applications

From a simple feeding pail to the most advanced fully robotised milking equipment, stainless steel is

found on farms in numerous applications, where it is an alternative to plastics, light metal and above all galvanised steel.

This new brochure from ISSF explains why stainless steel is used in agricultural applications and highlights

applications in fences, gates and partitions, feeding, watering, electrical and mechanical equipment, skin care, dairy farming, ancillary equipment and storage tanks for slurry and waste water.

Exploding Nickel Prices Driving The Stainless Steel Market Higher

Nickel prices at the time of writing, hovered around \$US30,000 per tonne. This suggests that alloy surcharges on stainless steel will remain at their current unprecedented high levels for at least two months.

For type 304 flat products, surcharges in October will be in excess of €1,900 per tonne in Europe and more than \$US2,500 per short ton in the US. Alloy surcharges have risen by more than 150 percent since January.

The LME price of nickel has doubled since March, and there is much controversy about the reasons for this. Users continue to claim that the nickel market is not under-supplied, and that the upsurge in prices is the result of speculation by financial investors. It is true that LME nickel

stocks have been extremely low. And this tends to support the opinion of those who say there is a structural shortage.

The hike in nickel prices is increasing the supply of scrap onto the market. World trade in stainless scrap has risen by more than 1 million tonnes over the last four years. But so far this is not having a dampening effect on the price of nickel.

Record levels of stainless steel production have certainly helped keep the figures high. Output of crude stainless in the first half of this year was almost 13.9 million tonnes – up by 6.5 percent year-on-year. Intriguingly, figures from the International Stainless Steel Forum reveal that most of this increase took place in the second quarter of the

year: output in April-June was 12.6 percent higher than in the same period a year earlier. This is likely to have continued into the third quarter – as the nickel prices headed up from \$US20,000 per tonne to \$US30,000 per tonne between June and August. There may also have been some of double booking, with buyers anxious to secure material in advance of September and October when the extremely elevated alloy surcharges came into effect.

There is certainly a danger of the market over-heating. Many of these duplicate orders may be cancelled. If the nickel price shows any sign of weakness, stainless buyers will be encouraged to hold off from placing new orders in the expectation of surcharges falling.

Jindal Stainless change in RTA

SL Stainless has decided to change its Registrar and Transfer Agent (RTA) from M/s. Abhipra Capital Limited to M/s. Link Intime India Private Limited, situated at 44 Community Center, 2nd Floor, Naraina Industrial Area, Phase I, Near PVR, Naraina, New Delhi - 110 028.

SL Stainless Ltd has informed BSE that the Sub Committee of Board of Directors of the Company in its meeting held on March 21, 2013 has decided to change its Registrar and Transfer Agent (RTA) from M/s. Abhipra Capital Limited to M/s. Link Intime India Private Limited, situated at 44 Community Center, 2nd Floor, Naraina Industrial Area, Phase I,

Near PVR, Naraina, New Delhi - 110 028 having registered office at C-13, Pannalal Silk Mills Compound, LBS Marg, Bhandup (West), Mumbai - 400 078, for both demat and physical registry work as well as for electronic connectivity with National Securities Depository Ltd. (NSDL) and Central Depository Services (India) Ltd. (CDSL). Source: BSE

Global Cold Rolled Coils Industry Report 2015

RESEARCHANDMARKETS
THE WORLD'S LARGEST MARKET RESEARCH STORE

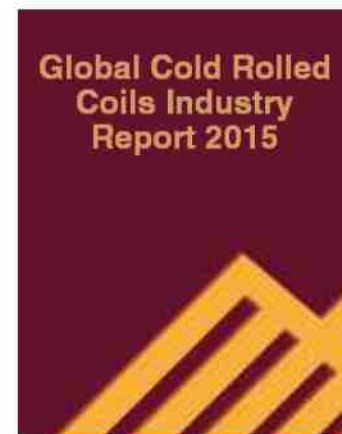

(http://www.researchandmarkets.com/research/cndpcz/global_cold)

has announced the addition of the "Global Cold Rolled Coils Industry Report 2015" report to Their offering.

old Rolled Coils The Global Industry Report 2015 is a professional and in-depth study on the current state of the cold rolled coils industry. The report Provides a basic overview of the industry Including definitions, classifications, applications and industry chain structure. The cold rolled coils market analysis is provided for the international markets Including development trends, competitive landscape analysis, and key regions development status. Development policies and plans are so Discussed and Manufacturing Processes and cost structures Analyzed. Cold rolled coils industry import / export, consumption, supply and demand figures and cost price production value and gross margins are therefore provided. The report Focuses on twenty-nine industry players providing information retrieval as company profiles, product picture and specification, production capacity, price , cost, production value and contact information. Upstream raw materials and equipment and downstream demand analysis is therefore Carried out. The cold rolled coils industry development trends and marketing channels are Analyzed. Finally the feasibility of new investment projects are Assessed

and overall research Conclusions offered. With 211 tables and figures the report Provides key statistics on the state of the industry and is a valuable source of guidance and direction for companies and worth individuals interested in the market. Key Topics Covered: Chapter One Cold Rolled Coils Industry Overview Chapter Two Cold Rolled Coils International and China Market Analysis Chapter Three Cold Rolled Coil Technical Data and Manufacturing Plants Analysis Chapter Four Cold Rolled Coil by Regions By Technology By Applications Chapter Five Cold Rolled Coils Manufacturing Process and Cost Structure Cold Rolled Coil 2009-2014 Chapter Six Productions Supply Sales Demand Market Status and Forecast Cold Rolled Coil Chapter Seven Key Manufacturers Analysis Chapter Eight Up and Down Stream Industry Analysis Cold Rolled Coils Chapter Nine marketing channels Analysis Cold Rolled Coil Chapter Ten Industry Development Trend Cold Rolled Coils Chapter Eleven Industry Development Proposals Cold Rolled Coils Chapter Twelve New Project Investment Feasibility Analysis Chapter Thirteen Global Cold Rolled Coils and China Industry Research Conclusions

Chinese Steel Losing Some Of Its Competitive Edge - Meps

K steel industry analysts, MEPS, reports that, in October, a profound change developed in the relationship between Chinese export steel prices and domestic selling values in the rest of the world.

According to the company's latest report, CHINA STEEL REVIEW, Chinese exporters lowered their steel prices last month for most

rolled steel products. The median reduction was US\$13 per tonne. However, average domestic selling figures in North America decreased by US\$17 per tonne in the same period. Local average steel selling values in the European Union decreased by US\$27 per tonne and those in East Asia fell by US\$35 in October.

The differential between Chinese export delivered prices and domestic selling values is a key item in the decision making process to purchase from China. Improved quality from Chinese mills has also, however, played its part.

It is possible that, in the near future, China's steel products could become less attractive to buyers in

the industrialised countries of the world, particularly, if their steel market conditions deteriorate further.

Total Chinese exports of all steel products, including tubes and semi-finished goods, totalled 51.54 million tonnes in the first eight months of this year. This represents an increase of 36 percent on the outturn in 2013. Foreign supplies of the nine finished rolled steel mill products, which had not undergone further processing, were recorded at

44.2 million tonnes - up by almost 45 percent in the same period.

The most popular finished rolled steel products for export remain hot rolled coil, wire rod and merchant bar. Statistics for the latter item are dubious, because it is widely believed that a proportion of billet sales were recorded as merchant bar in the official documentation to avoid export taxes. The tonnage sold under the banner of merchant bar has increased by approximately 75 percent so far this year. This

figure is almost double the average increase for all the other products.

The Chinese mills were able to lift their sales volumes of rolled steel products because of their ability to compete on price with other manufacturers around the world. This developed despite the cost of freight and extended period of time for delivery. A change to this situation may be on the horizon. Chinese steel exports may decline in 2015. Watch this space.

China's stainless steel market stabilises; downward pressure remains

China's domestic stainless market showed signs of stabilising this week on rising nickel prices, although participants expect further downward pressure as mills maintain output levels despite slack demand.

Prices for benchmark 304 cold rolled coil were in the range of 15,600-15,900 yuan (\$2,540-2,589) per tonne including VAT in the major Wuxi market on Thursday January 8 compared with 15,500-16,000 yuan (\$2,520-2,601) per tonne on Thursday December 25.

"Nickel prices have started to recover, which means at least that stainless steel prices will stop sliding," a trader based in Wuxi said.

The three-month London Metal Exchange nickel contract ended official trading on Wednesday January 7 at \$15,530-15,540 per tonne, up \$510-515 per tonne from a week ago.

However, the boost may have come too late, another trader warned, as buyers are now reducing purchase volumes ahead of the week-long Chinese New Year holiday.

Despite the drop off in demand, steelmakers are not scheduling any maintenance at plants to reduce supply to the market.

"Mills are not loosening their grip on production despite cashflow concerns," a distributor in eastern China said.

Once they run out of cash, they are likely to sell material cheaply to generate funds, he added, which will put pressure on spot prices.

Steel First sister publication Metal Bulletin assessed spot prices for high-grade NPI (Ni 10-15%) at 1,090-1,100 yuan (\$177-179) per nickel unit on Tuesday January 6, down 40-50 yuan (\$7-8) per nickel unit from last week.

Jiangsu-based Zhangjiagang Pohang's purchase price for high-grade NPI (Ni 10-15%) is at 1,090 yuan (\$177) per nickel unit this week, unchanged for the past two weeks.

Import duty wont impact pricing much: Jindal Stainless

The government has imposed 20 percent safeguard duty on imports of a certain variety of stainless steel from China to protect domestic players. In an interview to CNBC-TV18, Ramesh Nair, president & ED, Jindal Stainless informed that it is for a provisional period of 200 days on

hot-rolled coils of stainless steel and he is happy with it.

"This would actually help the sentiment of the market and also stem the import to a certain extent on hot-rolled side"

RAMESH NAIR
president & ED Jindal Stainless

Sony hops on fashion train with stainless steel SmartWatch 3

new stainless steel holder turns flagship wearable into fashion item

Sony has introduced a new, sleeker holder for the SmartWatch 3 at CES 2015, bringing it into line with the fashion trend that is starting to change the face of the wearables market.

When it was launched in September last year, the SmartWatch 3 came with a range of four interchangeable rubber wristbands, sold at £20 each, and was solidly marketed as a fitness wearable.

However, the change in presentation with the new stainless steel strap, which Sony describes as matching "contemporary with timeless aestheticism for a premium look and feel", could bring the SmartWatch 3, and its successors, to a new market.

Sony is by no means the first company to go down the fashion wearable route. The Motorola Moto 360, with its leather strap, is clearly a lifestyle item as much as a geeky one, while the META M1, Creoir Ibis and Intel MICA are all specifically marketed as luxury items.

Additionally, when it finally launches later this year, the Apple Watch will also be available with a stainless steel strap.

New look aside, there has been no change to the SmartWatch 3 in terms of specs. The computing module of the device still has a 1.6in, 320 x 320 display with transfective technology, built-in GPS as standard, and an IP68 certification, meaning it can be submerged in water for 30 minutes and is completely sealed against dust.

It also still has 4GB of flash memory, NFC capability (although this has no real use at the moment), just under 48 hours of battery life and convenient charging via micro-USB. The core unit is also removable, meaning it can be interchanged with the original rubber straps for SmartWatch 3, which are available for about £20, as well.

The stainless steel SmartWatch 3 will be available from February.

UK stainless scrap prices rise further on the back of nickel

Inter-merchant prices for stainless steel scrap in the UK rose by £20 (\$31) per tonne for the third consecutive week after the price of nickel jumped by about \$500 week-on-week, sources told Metal Bulletin sister publication Steel First on Friday December 5.

The three-month official daily bid/offer spread for nickel on the London Metal Exchange closed at \$16,870-16,875 on Friday, up by \$475-520 week-on-week. Steel First's price assessment for domestic 18/8 stainless steel scrap solids was £860-880 (\$1,349-1,380)

per tonne delivered to the scrapyards. Stainless steel turnings in the UK are priced at an average 85%

Read more: www.metalbulletin.com

East Asian stainless steel market still seeing poor demand

the East Asian stainless steel market continued to suffer from slow buying this week, although prices for nickel have rebounded.

Metal Bulletin sister publication

Steel First assessed prices for February shipments of benchmark 304 stainless 2mm cold rolled coil at \$2,320-2,500 per tonne cif East Asian port on Friday January 9, widening downwards by \$40 per

tonne from last week's assessment. European Central Bank president Mario Draghi has hinted of a growing likelihood...

ISSDA wary about rising stainless steel imports

Indian domestic stainless steel makers are worried about the rising imports from China, Japan and Korea, as capacity utilization falls to around 50-55 per cent, the Indian Stainless Steel Development Association (ISSDA) said.

While the country has an installed capacity of around 5 million tonnes per annum (mtpa), only about 2.4-2.8 mtpa of stainless steel was produced. However, India remains the world's third largest producer.

"With growing imports from China,

Japan and Korea, Indian stainless steel makers are in a fix. We will continue to bleed until basic Customs duty on all the key raw materials in India are reduced to zero to ensure a level playing field," Mr. N.C. Mathur, President of ISSDA, pointed out.

Expo 2015 the proposals of Centro Inox

Centro Inox subscribed the "First international call for ideas aimed at developing the cultural program of the Pavillion of Civil Society at EXPO Milano 2015" in order to participate in the project "Exploding energies to change the world" with three proposals:

A stand during the week June 8-14, 2015 for the launch of the

"Educational program for the promotion of the technical and market knowledge of stainless steels",

A half-day meeting, on June 10, 2015 focused on "Production and conservation of foodstuffs: the stainless steel hygienic chain",

A half-day meeting, on September 24, 2015, focused on "Stainless steel. Eco-sustainability and recyclability".

India to remain world's fourth largest steel maker this year

NEW DELHI: India will remain the world's fourth largest steel maker this year even as its production growth outpaced the global average in the first 11 months, World Steel Association (WSA) data showed.

India has produced 76.19 million tonnes (MT) steel in the January-November period compared to 74.37 MT during the same period last year, clocking 2.4 per cent growth and positioned itself again at the fourth slot.

Global steel production during the period grew by 1.8 per cent to 1,497.75 MT, compared to 1,471.44 MT in the same period last year.

Despite dip in production in some previous months, China has been world's top steel producer in the first

eleven months of current year, with output of around 650 MT.

Japan produced 101.66 MT during the 11 months, clocking a 0.4 per cent growth over 101.25 MT in the year-ago period.

Production in the US grew by 1.5 per cent in the first 11 months of the year to 80.95 MT from 79.75 MT a year ago. Though the gap in production between India and the US is not wide as of now, that is unlikely to change the order as the US produced more steel even in November.

"India may topple the US next year as a lot of capacity is being added here, and a good part of that is coming on stream in the next couple of months, from around 101 MT

now," according to an industry official.

The ranking among the top four steel producers remain the same for the last four years.

India produced 6.89 million tonnes (MT) steel in November compared to 6.57 MT a year ago. During the month, world's steel output was 130.52 MT, as against 130.42 MT a year earlier. Steel production in China declined yet again during the month by 0.2 per cent to 63.30 MT.

During November, Japan produced 9.17 MT steel, the US 7.2 MT, South Korea 5.91 MT and Russia 5.84 MT.

इस अरबपति बिजनेसमैन ने अपने गांववालों को तोहफ में दिए लग्जरी फ्लैट

Multimillionaire Xiong Shuihua gifts luxury flats to 72 families

बजिंग। जिन झुग्गियों में खेलकर कभी यह अरबपति बिजनेसमैन बड़ा हुआ था, उन्हें ही तुड़वा कर इसने यहां लग्जरी फ्लैट बनवा दिए। यही नहीं इस व्यापारी ने यह सभी फ्लैट अपने उन्हीं गांववालों को तोहफे में दे दिए। साथ ही बुजुर्ग और गरीब गांववालों के लिए सप्ताह में तीन दिन मुफ्त खाने का भी इंतजाम किया है। चीन के स्टील किंग शियोंग शुईहुआ जिनयुई शहर के करीब एक गांव में 1955 में पैदा हुए थे। उनका परिवार बहुत गरीब था और इन्हीं गांववालों ने उस वक्त उनके परिवार की बहुत मदद की थी। तमाम मेहनत के बाद आज 54 वर्ष के शियोंग जब अमीर हो गए हैं तो उन्होंने अपने गांववालों की उदारता के बदले में उन्हें कुछ देने की सोची।

शियोंग की बदौलत यहां 72 परिवारों को लग्जरी फ्लैट मिले हैं और वह 18 परिवार जिन्होंने शियोंग के परिवार की बहुत मदद की थी उनके लिए उन्होंने विला बनवाए हैं। इस सब के लिए कुल 4 मिलियन पाउंड खर्च किए गए हैं। शियोंग कहते हैं, "मैंने इतना पैसा कमा लिया कि मुझे समझ ही नहीं आ रहा था कि इतने पैसे का क्या करूं। मैं अपनी जड़ें नहीं भूला था। मैंने हमेशा खुद को कर्जमुक्त रखा और मैं उन परिवारों का खुदपर सबसे बड़ा कर्ज भी उतारना चाहता था जो उन्होंने मेरे परिवार की मदद करके तब मुझपर चढ़ाया था जब मैं छोटा था।"

गांव में रहने वाले 75 वर्षीय कियॉन्ग चू ने बताया, "मैं शियोंग के माता पिता को जानता हूं। वे बहुत दयालू थे और दूसरों की बहुत परवाह किया करते थे। मुझे खुशी है कि उनका बेटा भी उनके जैसा ही दयालू है।"

Design And Technical Efficiency In The New Decorated 470li Stainless Steel Hood

Stainless steel is one of the most widely used materials in the production of hoods, since it is capable to meet all technical and aesthetical requirements. From a technical point of view, stainless steel ensures mechanical strength, resistance to even extremely high thermal loads, but above all, excellent resistance to corrosion phenomena. Products remain unchanged throughout their life cycle and require only few maintenance operations over time. Among the hoods included in the product range of this company, we find built-in, wall, and island hoods. One of the latest products is the "downdraft", a hood that can be considered both an in-built and an island hood. This product is the result of the combination of two materials - stainless steel and black tempered glass - that add to it a particular touch of modernity and elegance. For this new model of stainless steel hood, the company has chosen an innovative material, the superferritic 470LI (EN 1.4613) stainless steel, with a linen pattern finish, a premium material capable to stand heavy stresses and high temperatures, and to resist to corrosion, as the austenitic AISI 316 stainless steel. In addition, being a material with ferritic structure, it benefits from the advantage of price stability. The decorated linen pattern finish is obtained during the steel sheet cold-rolling process by means of special decorated rollers. The stainless steel sheet is subsequently submitted to a bright-annealing process.
